EX.2 Simplify completely:

(a) $(x^2y^3)^2 = (x^2)^2 (y^3)^2 = x^4y^6$

(b) $(x^2)^3 (y^3)^3 (z^2)^4 = x^6y^9z^8$

(c) $(2x^2y^3z^4)^3 = 2^3x^6y^9z^{12} = 8x^6y^9z^{12}$

(d) $(-2a^2b^3)^2 = (-2)^2a^4b^6 = 4a^4b^6$

(e) $(-2a^2b^3)^3 = (-2)^3a^6b^9 = -8a^6b^9$

(f) $-(2x^2y^3)^4 = -(2)^4x^8y^{12} = -16x^8y^{12}$

Mathematics And Culture

Alan Bishop

Mathematics And Culture:

Cognition in Practice Jean Lave, 1988-07-29 Most previous research on human cognition has focused on problem solving and has confined its investigations to the laboratory. As a result it has been difficult to account for complex mental processes and their place in culture and history. In this startling indeed disorienting study Jean Lave moves the analysis of one particular form of cognitive activity arithmetic problem solving out of the laboratory into the domain of everyday life. In so doing she shows how mathematics in the real world like all thinking is shaped by the dynamic encounter between the culturally endowed mind and its total context a subtle interaction that shapes 1 Both the human subject and the world within which it acts. The study is focused on mundane daily activities such as grocery shopping for best buys in the supermarket, dieting and so on. Innovative in its method, fascinating in its findings, the research is above all significant in its theoretical contributions. It offers a cogent critique of conventional cognitive theory, turning for an alternative to recent social theory and weaving a compelling synthesis from elements of culture theory, theories of practice and Marxist discourse. The result is a new way of understanding human thought processes, a vision of cognition as the dialectic between persons acting and the settings in which their activity is constituted. The book will appeal to anthropologists for its novel theory of the relation of cognition to culture and context, to cognitive scientists and educational theorists and to the plain folks who form its subject and who will recognize themselves in it, a rare accomplishment in the modern social sciences.

Mathematics Elsewhere

Marcia Ascher, 2018-06-05 Mathematics Elsewhere is a fascinating and important contribution to a global view of mathematics. Presenting mathematical ideas of peoples from a variety of small scale and traditional cultures, it humanizes our view of mathematics and expands our conception of what is mathematical. Through engaging examples of how particular societies structure time, reach decisions about the future, make models and maps, systematize relationships and create intriguing figures, Marcia Ascher demonstrates that traditional cultures have mathematical ideas that are far more substantial and sophisticated than is generally acknowledged. Malagasy divination rituals, for example, rely on complex algebraic algorithms. And some cultures use calendars far more abstract and elegant than our own. Ascher also shows that certain concepts assumed to be universal, that time is a single progression, for instance, or that equality is a static relationship, are not. The Basque notion of equivalence, for example, is a dynamic and temporal one not adequately captured by the familiar equal sign. Other ideas taken to be the exclusive province of professionally trained Western mathematicians are in fact shared by people in many societies. The ideas discussed come from geographically varied cultures including the Borana and Malagasy of Africa, the Tongans and Marshall Islanders of Oceania, the Tamil of South India, the Basques of Western Europe and the Balinese and Kodi of Indonesia. This book belongs on the shelves of mathematicians, math students and math educators and in the hands of anyone interested in traditional societies or how people think. Illustrating how mathematical ideas play a vital role in diverse human endeavors, from navigation to social interaction to religion, it offers through the

vehicle of mathematics unique cultural encounters to any reader

curious about how mathematics relates to culture Mathematical Enculturation Alan Bishop, 2012-12-06 Mathematics is in the unenviable position of being simultaneously one of the most important school subjects for today's children to study and one of the least well understood. Its reputation is awe inspiring. Everybody knows how important it is and everybody knows that they have to study it. But few people feel comfortable with it so much so that it is socially quite acceptable in many countries to confess ignorance about it to brag about one's incompetence at doing it and even to claim that one is mathophobic. So are teachers around the world being apparently legal sadists by inflicting mental pain on their charges? Or is it that their pupils are all masochists enjoying the thrill of self-inflicted mental torture? More seriously, do we really know what the reasons are for the mathematical activity which goes on in schools? Do we really have confidence in our criteria for judging what's important and what isn't? Do we really know what we should be doing? These basic questions become even more important when considered in the context of two growing problem areas. The first is a concern felt in many countries about the direction which mathematics education should take in the face of the increasing presence of computers and calculator-related technology in society. *Changing the Culture* Naomi Fisher, Harvey Keynes, 1995 This volume is an outgrowth of a series of programs organized by the Mathematicians and Education Reform MER Network between 1990 and 1993. These programs explored the ways in which the mathematical sciences community has responded to educational challenges. Mathematicians who had made a serious commitment to educational reform served as role models inspiring others to contribute their efforts to this important work. The discussions raised many questions and highlighted many insights about the nature of educational reform and how the mathematics research community can contribute to it. The papers in this volume present perspectives on the future of these efforts, varied examples of how individual mathematicians have become involved in educational reform, and case studies of how the community is responding to the need for reform. Viewing the mathematics culture through the prism of his or her own experience and encounters, each author contributes a valuable piece for the reader to consider in trying to envision what the large picture will be as mathematics education continues to evolve.

Mathematics and Culture I Michele Emmer, 2003-12-02 A fascinating and insightful collection of papers on the strong links between mathematics and culture. The contributions range from cinema and theatre directors to musicians, architects, historians, physicians, graphic designers, and writers. The text highlights the cultural and formative character of mathematics, its educational value, and imaginative dimension. These articles are highly interesting, sometimes amusing, and make excellent starting points for researching the strong connection between scientific and literary culture. **Mathematics in Popular Culture** Jessica K. Sklar, Elizabeth S. Sklar, 2014-01-10 Mathematics has maintained a surprising presence in popular media for over a century. In recent years, the movies *Good Will Hunting*, *A Beautiful Mind*, and *Stand and Deliver*; the stage plays *Breaking the Code* and *Proof*; the novella *Flatland*; and the hugely successful television crime series *NUMB3RS* all weave mathematics prominently into their storylines. Less obvious but pivotal references to the subject appear in the blockbuster TV
