Mathematics Mechanization And Applications:

Mathematics Mechanization and Applications Xiao-Shan Gao, Dongming Wang, 2000-07-25 Mathematics Mechanization and Applications provides surveys for major research developments on mechanizing algebraic equations solving and geometric theorem proving with diverse applications accomplished in Wu's extended Chinese group. The book addresses the frontiers of research with new and original ideas and results, includes sophisticated and successful applications to scientific and engineering problems, covers polynomial system solving, geometric reasoning, computer algebra, and mathematical software. It is comprehensive and focused and easy to read with a uniform presentation, contains an extensive bibliography of high value for reference to western readers. This book is of interest to researchers, software developers, and graduate students in symbolic and algebraic computation, automated theorem proving, algorithmic mathematics, and computer aided mathematical problem solving. It is relevant for researchers and university teachers in computer aided instruction and education, and for engineers and practitioners in mechanics, computer aided geometric design, geometric modelling, and robotics. People in many other related areas, from pure mathematics to computer aided design, particularly those who know of the Wu method but have little knowledge of it or the work that has arisen around it, will also find the book good reading.

Mathematics Mechanization Wen-tsün Wu, 2000 **Computer Algebra and Geometric Algebra with Applications** Hongbo Li, 2005-06-21 This book constitutes the thoroughly refereed joint post proceedings of the 6th International Workshop on Mathematics Mechanization IWMM 2004 held in Shanghai, China, in May 2004, and the International Workshop on Geometric Invariance and Applications in Engineering GIAE 2004 held in Xian, China, in May 2004. The 30 revised full papers presented were rigorously reviewed and selected from 65 presentations given at the two workshops. The papers are devoted to topics such as applications of computer algebra in celestial and engineering multibody systems, differential equations, computer vision, computer graphics, and the theory and applications of geometric algebra in geometric reasoning, robot vision, and computer graphics. *Advanced Intelligent Computing Theories and Applications. With Aspects of Theoretical and Methodological Issues* De-Shuang Huang, Donald C. Wunsch, Daniel S. Levine, Kang-Hyun Jo, 2008-08-28 The International Conference on Intelligent Computing ICIC was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, bioinformatics, and computational biology, etc. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems, and solutions related to the multifaceted aspects of intelligent computing. ICIC 2008 held in Shanghai, China, September 15-18, 2008, constituted the 4th International Conference on Intelligent Computing. It built upon the success of ICIC 2007, ICIC 2006, and ICIC 2005 held in Qingdao, Kunming, and Hefei, China, 2007, 2006, and 2005, respectively. This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational

intelligence and bridges theoretical research with applications Therefore the theme for this conference was Emerging Intelligent Computing Technology and Applications Papers focusing on this theme were solicited addressing theories methodologies and applications in science and technology Mathematics Mechanization Wu Wen-tsun,2001-04-30 This book is a collection of essays centred around the subject of mathematical mechanization It tries to deal with mathematics in a constructive and algorithmic manner so that reasoning becomes mechanical automated and less laborious The book is divided into three parts Part I concerns historical developments of mathematics mechanization especially in ancient China Part II describes the underlying principles of polynomial equation solving with polynomial coefficients in fields restricted to the case of characteristic 0 Based on the general principle some methods of solving such arbitrary polynomial systems may be found This part also goes back to classical Chinese mathematics as well as treating modern works in this field Finally Part III contains applications and examples Audience This volume will be of interest to research and applied mathematicians computer scientists and historians in mathematics *Elimination Practice: Software Tools And Applications (With Cd-rom)* Dongming Wang,2004-02-19 With a software library included this book provides an elementary introduction to polynomial elimination in practice The library Epsilon implemented in Maple and Java contains more than 70 well documented functions for symbolic elimination and decomposition with polynomial systems and geometric reasoning The book presents the functionality implementation and performance of Epsilon and demonstrates the usefulness of the elimination tool by a number of selected applications together with many examples and illustrations The reader will find Epsilon an efficient tool applicable to a wide range of problems in science engineering and industry and this book an accessible exposition and a valuable reference for elimination theory methods and practice **Machine Proofs in Geometry** Shang-Ching Chou,Xiao-Shan Gao,Jingzhong Zhang,1994 This book reports recent major advances in automated reasoning in geometry The authors have developed a method and implemented a computer program which for the first time produces short and readable proofs for hundreds of geometry theorems The book begins with chapters introducing the method at an elementary level which are accessible to high school students latter chapters concentrate on the main theme the algorithms and computer implementation of the method This book brings researchers in artificial intelligence computer science and mathematics to a new research frontier of automated geometry reasoning In addition it can be used as a supplementary geometry textbook for students teachers and geometers By presenting a systematic way of proving geometry theorems it makes the learning and teaching of geometry easier and may change the way of geometry education **Chinese Mathematics Into the 21st Century** Wen-tsün Wu,Minde Cheng,1991 *Mathematical Reviews* ,2004 *Physics Letters* ,2000 General physics atomic physics molecular physics and solid state physics **The British National Bibliography** Arthur James Wells,2005 *Computational Science - ICCS ...* ,2003 Automated Deduction in Geometry ,2002
