The Handbook of Research Design in Mathematics and Science Education is based on results from an NSF supported project REC 9450510 aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and science education A primary goal is to describe several of the most important types of research designs that have been pioneered recently by mathematics and science educators have distinctive characteristics when they are used in projects that focus on mathematics and science education and have proven to be especially productive for investigating the kinds of complex interacting and adapting systems that underlie the development of mathematics or science students and teachers or for the development dissemination and implementation of innovative programs of mathematics or science instruction The volume emphasizes research designs that are intended to radically increase the relevance of research to practice often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process Examples of such research designs include teaching experiments clinical interviews analyses of videotapes action research studies ethnographic observations software development studies or curricula development studies more generally and computer modeling studies This book's second goal is to begin discussions about the nature of appropriate and productive criteria for assessing and increasing the quality of research proposals projects or publications that are based on the preceding kind of research designs A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research The NSF supported project from which this book developed involved a series of mini conferences in which leading researchers in mathematics and science education developed detailed specifications for the book and planned and revised chapters to be included Chapters were also field tested and revised during a series of doctoral research seminars that were sponsored by the University of Wisconsin's OERI supported National Center for Improving Student Learning and Achievement in Mathematics and Science In these seminars computer based videoconferencing and www based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders responding to questions and comments from doctoral students and faculty members representing more than a dozen leading research universities throughout the USA and abroad A Web site with additional
