**Murder Mysteries** Jill Whieldon,2019-01-21 We all like to think we can solve a murder given the right clues Here's another chance to use mathematics skills to identify whodunnit following the great success of the first book in the series Mini Mathematical Murder Mysteries The students are given the data or a diagram to solve a problem which is always which of various characters is a murderer To find out the student must solve all or most of the questions on the sheet to identify wrong answers as well as correct ones Problems are staged so there is an element of suspense for the individual and racing between students to solve the mystery The topics covered in this book are appropriate for ages 12-14 years The tasks have been used successfully with older pupils too as a reminder of topics covered previously They would also be suitable for younger pupils who have met the appropriate language and content They are likely to take about 40 minutes but this will depend on the ability of the class to coordinate the different aspects of each task The book is aimed at both teachers and parents Teachers This is a set of consolidation resources rather than a teaching tool They have worked well with a variety of classes often putting the students in pairs to enable them to talk about the methods they're using while they solve the murder The author has found that their cooperative skills have improved as has their ability to plan and delegate in a bid to win Parents Much more fun than having endless mathematics exercises to trawl through Children will engage with the mathematics here presented in an entertaining way Ideal for use in revision or other consolidation exercises They are also great fun for after school clubs such as mathematics clubs seeking to run short activities
