Matrix Analysis For Scientists And Engineers:

Matrix Analysis for Scientists and Engineers Alan J. Laub, 2005-01-01 Prerequisites for using this text are knowledge of calculus and some previous exposure to matrices and linear algebra including for example a basic knowledge of determinants singularity of matrices eigenvalues and eigenvectors and positive definite matrices There are exercises at the end of each chapter **BOOK JACKET**

Computational Matrix Analysis Alan J. Laub, 2012-01-01 Using an approach that author Alan Laub calls matrix analysis for grown ups this new textbook introduces fundamental concepts of numerical linear algebra and their application to solving certain numerical problems arising in state space control and systems theory It is written for advanced undergraduate and beginning graduate students and can be used as a follow up to Matrix Analysis for Scientists and Engineers SIAM 2005 a compact single semester introduction to matrix analysis for engineers and computational scientists by the same author Computational Matrix Analysis provides readers with a one semester introduction to numerical linear algebra an introduction to statistical condition estimation in book form for the first time and an overview of certain computational problems in control and systems theory The book features a number of elements designed to help students learn to use numerical linear algebra in day to day computing or research including a brief review of matrix analysis including notation and an introduction to finite IEEE arithmetic discussion and examples of conditioning stability and rounding analysis an introduction to mathematical software topics related to numerical linear algebra a thorough introduction to Gaussian elimination along with condition estimation techniques coverage of linear least squares with orthogonal reduction and QR factorization variants of the QR algorithm and applications of the discussed algorithms
