Influenced by the psychoanalytical teachings of Sigmund Freud Surrealism emerged among the generation that had witnessed the insanity and horror of the First World War and was conceived of as a framework for investigating the little understood phenomena of dreams and the unconscious In these territories the surrealists recognized an alternative axis of human experience that did not align with the rational workaday rhythms of modern life and which instead revealed the extent to which individual subjectivity had been constrained by post Enlightenment rationalism and by the economic forces governing the post industrial world Against these trends the Surrealist Movement has sought to re evaluate the foundations of modern society and reassert the primacy of the imagination for almost a century to date This book offers focused introductions to numerous writers poets artists filmmakers precursors groups movements events concepts cultures nations and publications connected to Surrealism providing orientation for students and casual readers alike Historical Dictionary of Surrealism Second Edition contains a chronology an introduction and an extensive bibliography The dictionary section has more than 200 cross referenced entries on the Surrealist Movement s engagement with the realms of politics philosophy science poetry art and cinema and charts the international surrealist community s diverse explorations of specific thematic territories such as magic occultism mythology eroticism and gothicism This book is an excellent resource for students researchers and anyone wanting to know more about surrealism

**The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition** Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak Exploring the Invisible Lynn Gamwell, 2002 This sumptuous and stunningly illustrated book shows through words and images how directly profoundly and indisputably modern science has transformed modern art Beginning in the mid nineteenth century a strange

and exciting new world came into focus a world of microorganisms in myriad shapes and colors prehistoric fossils bizarre undersea creatures spectrums of light and sound molecules of water and atomic particles Exploring the Invisible reveals that the world beyond the naked eye made visible by advances in science has been a major inspiration for artists ever since influencing the subjects they choose as well as their techniques and modes of representation Lynn Gamwell traces the evolution of abstract art through several waves beginning with Romanticism She shows how new windows into telescopic and microscopic realms combined with the growing explanatory importance of mathematics and new definitions of beauty derived from science broadly and profoundly influenced Western art Art increasingly reflected our more complex understanding of reality through increasing abstraction For example a German physiologist s famous demonstration that color is not in the world but in the mind influenced Monet s revolutionary painting with light As the first wave of enthusiasm for science crested abstract art emerged in Brussels and Munich By 1914 it could be found from Moscow to Paris Throughout the book are beautiful images from both science and art some well known others rare that reveal the scientific sources mined by Impressionist and Symbolist painters Art Nouveau sculptors and architects Cubists and other nineteenth and twentieth century artists With a foreword by astronomer Neil deGrasse Tyson Exploring the Invisible appears in an age when both artists and scientists are exploring the deepest meanings of life consciousness and the universe
