Other Oceans:

Space and Oceans ATF Press, 2022-10-01 There is a growing concern over the ubiquitous distribution of plastic pollution that is evolving in the Beaufort Gyre in the Arctic Ocean prompting international collaboration and new environmental measures Marine pollution is recognised as an immediate threat to both land and marine ecosystems Satellites have proven useful in identifying ocean plastic patches and current movements in other oceans but little research has been applied to the Arctic a region that impacts eight countries making up the Arctic Circle This interdisciplinary team project investigates the use of Sentinel 2 Sentinel 6 Fourier Transform Spectroscopy stratospheric balloons and autonomous underwater vehicles to provide an integrated strategy including communication and outreach to tackling marine plastic pollution while recognizing that it is necessary to also prevent plastics from entering the ocean in the first place **The Ocean, Volume 4** Hervé Claustre, Carolyn Scheurle, Laura Lorenzoni, Sanae Chiba, Emily King, 2024-02-13 The ocean allowed life to develop on earth billions of years ago it is vital for all of us and it will guarantee the future of humanity The ocean is vast deep harsh and somehow rebellious to reveal its secrets and hence there is much that is unexplored and not yet understood Scientists need to study the ocean to better understand its functioning its properties as well as how it shapes our environment and impacts us For example do you know what the role of the ocean is on weather and climate There also remains so much to explore and investigate as diverse oceanic resources fish stocks bio molecules renewable energies but also minerals oil and gas How can we make sure that our use of these resources is respectfully done and sustainable and how can we minimize our impacts e.g. pollution acidification deoxygenation on the ocean as our human population increases In this Collection of Frontiers for Young Minds ocean scientists from various disciplines explain recent discoveries or fundamental concepts They share their knowledge and motivations and give insights into innovative tools and methods used to better understand our ocean The Collection targets a large range of oceanic environments from the open ocean to the shores the surface to the abysses including specific areas like coral reefs It also targets the connections of the ocean with its interfaces atmosphere ice coast It seeks to cover marine disciplines that range from physics to chemistry from biology and genomics to biodiversity and ecology and from economy to conservation and policies Finally it encompasses a great variety of scales ranging from the diel to geological time scales from local regional to global scales and also from the tiniest cells to the biggest living animals on our planet The United Nations have declared the 2021-2030 period as the Decade of Ocean Science for Sustainable Development stressing the urgent need to approach fundamental issues related to the ocean and the future of humanity on well-sounded scientific grounds and knowledge The oceanic sciences are indeed undertaking a revolution thanks in particular to robotization and the massive intrusion of big data and artificial intelligence This Ocean Collection aims to accompany this evolution to provide information to young readers that will help them to increase their understanding of the ocean and its central role in nature and our lives We hope to empower them to make informed decisions in these challenging times and to

The Role of the Indian Ocean for Global Peace – Interdisciplinary Issues Dr. (Capt.) Vivek Jain, 2023-11-02 This book deals with the various interdisciplinary issues of the Indian Ocean individually and collectively such as its history geography nautical elements economics trade routes old and new blue economy deep sea mining fisheries management tourism scourge of piracy pollution Law of the Sea UNCLOS 1982 and the different perspectives of its littoral countries on geopolitics international law international relations and maritime partnerships It is the most important ocean in the world 33% of the global population lives in the area and 50 60% of the world's maritime trade transits through it In addition around 60% of global oil and 26% of global gas reserves along with pristine beaches are located here To comprehend the interdisciplinary issues the editor embarked on a voyage to discover persuade and collaborate with exceptionally brilliant influential experts from prominent littoral countries India Indonesia Iran South Africa Malaysia and Singapore with relevant experience to expound the above subject areas In addition geopolitical conflicts hostilities and trade wars are on the rise war seems inevitable but not imminent Any conflict is likely to originate in other oceans and seas but will end up impacting the Indian Ocean's littoral countries Accordingly these countries must comprehend the interdisciplinary issues and the special role of the Indian Ocean to prevent all encompassing wars hostilities from widening at a global level and thereafter must flesh out plans to shield themselves They must also understand the area's role in working towards global peace by comprehending the above interdisciplinary issues The role of the Indian Ocean in global peace can only be achieved through maritime partnerships between its littoral countries and their avoidance of impulses to invite outside powers to balance each other's power However maritime partnerships are easier said than done At the very least the maritime partnership between two major Indian Ocean littoral powers India and Indonesia is critical to shield the region from geopolitical firestorms Hopefully this maritime partnership's tactic of embracing a carrot and stick approach will eventually persuade global powers from outside the Indian Ocean region to improve their conduct to achieve global peace *Extending Jurisdiction of the United States Over Certain Ocean Areas, Hearings Before ..., 93-2, Oct. 8, 9, and 11, 1974* United States. Congress. Senate. Committee on Armed Services, 1974 *Ecosystems of the Deep Oceans* P.A. Tyler, 2003-03-27 This volume examines the deep sea ecosystem from a variety of perspectives The initial chapters examine the deep sea floor the deep pelagic environment and the more specialised chemosynthetic environments of hydrothermal vents and cold seeps These environments are examined from the perspective of the relationship of deep sea animals to their physico chemical environment Later chapters examine the biogeography of the main deep oceans Atlantic Pacific and Indian with particular attention to the downward flux of surface derived organic matter and how this drives the processes within the deep sea ecosystem The peripheral deep seas including the polar seas and the marginal deep seas inter alia the Mediterranean Red

Caribbean and Okhotsk seas are explored in the same context The final chapters examine the processes occurring in the deep sea and include an analysis of why the deep sea has high species diversity how the fauna respond to organic input and how species have adapted reproductive activity in the deep sea The volume concludes with an analysis of the anthropogenic impact on the deep sea An Essay on Geology Considered in Relation to Its Conformity with Revealed Religion; to which is Added the History of St. Helens,&c., as Given in the New Directory Published by P.
