foster innovation and deliver economic value. Small professional practices in the built environment are crucial to the success and long term viability of the design, construction and property industries. This research based book addresses the urgent need to better understand the nature and process of innovation in these important firms. The authors offer an analysis of both why and how innovation is a key competitive factor for small professional practices in the built environment. As these practices are located in different business environments and behave in different ways to other types of industry firms, the context specific methodology to design, implement and assess innovation in small professional practices presented in this book will appeal to researchers and practitioners in surveying and design. Innovation in Small Professional Practices in the Built Environment makes a significant contribution to an underdeveloped area of innovation by offering new theoretical and practical insights and models grounded in results from a 22 month case study of a small professional practice.

Construction Project Management Joe F. McCarthy, 2010 integrates business knowledge principles and practices of project management and construction management will help you achieve a strategic vision, continuously improve construction operations and manage industrial, commercial and institutional projects from conception to occupancy. Publisher's description:

Value Management Omar W. Massoud, Andrew Gale, University of Manchester Institute of Science and Technology. Building Engineering, 1998. **Construction Project Management** Peter Fewings, 2005-11-23. It considers all aspects of project management with particular emphasis on increasing efficiency and communication at all stages.

Construction Digitalisation Douglas Aghimien, Clinton Aigbavboa, Ayodeji Oke, Wellington Thwala, 2021-07-25. This book explores construction digitalisation particularly in developing countries. The book conceptualises a digitalisation capability maturity model that will enable construction organisations to self assess and benchmark their digital capabilities in their quest for digital transformation. Digitalisation offers a significant solution to the age long problems of the construction industry. Research shows that when construction organisations transform from a traditional service delivery approach to a more digitalised approach significant improvement in project delivery and better competitive advantage for these organisations will be attained. The attainment of these benefits is evident in developed countries where the digitalisation of construction activities continues apace. Unfortunately the story is not the same for construction organisations in developing economies. While some organisations might be willing to be digitally transformed most have no clue how to go about it. To this end this book provides guidelines for construction organisations seeking to transform their entities digitally. Its content is a valuable read for construction company owners as it provides a model which they can use in the digitalisation of their activities. Also regulatory bodies in the construction industry can adopt the capabilities identified in the book as essential prerequisites for their members. Furthermore the book serves as excellent theoretical background reading for management researchers seeking to expand their knowledge on the digitalisation of the construction industry and other associated industries.
