Simplicius': On Aristotle On the Soul 3.1-5 H.J. Blumenthal, 2014-04-22 In *On the Soul* 3.1-5 Aristotle goes beyond the five senses to the general functions of sense perception the imagination and the so called active intellect the of which was still a matter of controversy in the time of Thomas Aquinas In his commentary on Aristotle's text Simplicius insists that the intellect in question is not something transcendental but the human rational soul He denies both Plotinus' view that a part of the soul has never descended from uninterrupted contemplation of the Platonic Forms and Proclus' view that the soul cannot be changed in its substance through embodiment He also denies that imagination sees things as true or false which requires awareness of one's own cognitions He thinks that imagination works by projecting imprints In the case of mathematics it can make the imprints more like shapes taken on during sense perception or more like concepts which calls for lines without breadth He acknowledges that Aristotle would not agree to reify these concepts as substances but thinks of mathematical entities as mere abstractions Addressing the vexed question of authorship H.J. Blumenthal concludes that the commentary was written neither by Simplicius nor Priscian In a novel interpretation he suggests that if Priscian had any hand in this commentary it might have been as editor of notes from Simplicius' lectures **Mathematical Reviews**, 2007

'Simplicius': On Aristotle On the Soul 3.6-13 Carlos Steel, 2014-04-22 This is the fourth and last volume of the translation in this series of the commentary on Aristotle *On the Soul* wrongly attributed to Simplicius Its real author most probably Priscian of Lydia proves in this work to be an original philosopher who deserves to be studied not only because of his detailed explanation of an often difficult Aristotelian text but also because of his own psychological doctrines In chapter six the author discusses the objects of the intellect In chapters seven to eight he sees Aristotle as moving towards practical intellect thus preparing the way for discussing what initiates movement in chapters nine to 11 His interpretation offers a brilliant investigation of practical reasoning and of the interaction between desire and cognition from the level of perception to the

intellect In the commentator s view Aristotle in the last chapters 12 13 investigates the different type of organic bodies corresponding to the different forms of life vegetative and sensory from the most basic touch to the most complex Notices of the American Mathematical Society American Mathematical Society,1992 **Bulletin (new Series) of the American Mathematical Society** ,1992 *Physiological Notes on Primary Education and the Study of Language* Mary Putnam Jacobi,1889 **Report of the Dean** Columbia University.
