Ways of Thinking, Ways of Seeing Chris Bissell,Chris Dillon,2012-02-03

This fascinating book examines some of the characteristics of technological engineering models that are likely to be unfamiliar to those who are interested primarily in the history and philosophy of science and mathematics and which differentiate technological models from scientific and mathematical ones Themes that are highlighted include the role of language the models developed for engineering design have resulted in new ways of talking about technological systems communities of practice related to the previous point particular engineering communities have particular ways of sharing and developing knowledge graphical representation engineers have developed many ways of reducing quite complex mathematical models to more simple representations reification highly abstract mathematical models are turned into objects that can be manipulated almost like components of a physical system machines not only the currently ubiquitous digital computer but also older analogue devices slide rules physical models wind tunnels and other small scale simulators as well as mechanical electrical and electronic analogue computers mathematics and modelling as a bridging tool between disciplines This book studies primarily modelling in technological practice It is worth noting that models of the type considered in the book are not always highly valued in formal engineering education at university level which often takes an applied science approach close to that of the natural sciences something that can result in disaffection on the part of students Yet in an informal context such as laboratories industrial placements and so on a very different situation obtains A number of chapters considers such epistemological aspects as well as the status of different types of models within the engineering education community The book will be of interest to practising engineers and technologists sociologists of science and technology and historians and philosophers of science and mathematics It will also be written in a way that will be accessible to non specialists

Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems

Mario Lucertini,Ana Millàn Gasca,Fernando Nicolò,2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLO 1

Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of science and technology have devoted much attention to the problem of technology as knowledge

and to the emergence of an autonomous engineering science in the Industrial Age. This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowledge linked to the consolidation of autonomous academic engineering research in the 20th century. A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well. The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb procedures. But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity.

Mathematical Modelling Murray S. Klamkin, 1987-01-01 *Mathematics of Computing* Miscellaneous
Mathematical Modelling in Science and Technology Studies Karmeshu, 1992 *Engineering Design and Mathematical Modelling* Nnamdi Nwulu, Mammo Muchie, 2020-12-17 *Engineering Design and Mathematical Modelling* Concepts and Applications consists of chapters that span the Engineering design and mathematical modelling domains. Engineering design and mathematical modelling are key tools/techniques in the Science Technology and Innovation spheres. Whilst engineering design is concerned with the creation of functional innovative products and processes, mathematical modelling seeks to utilize mathematical principles and concepts to describe and control real world phenomena. Both of these can be useful tools for spurring and hastening progress in developing countries. They are also areas where Africa needs to skill up in order to build a technological base. The chapters in this book cover the relevant research trends in the fields of both engineering design and mathematical modelling. This book was originally published as a special issue of the African Journal of Science Technology Innovation and Development.

Researching Mathematical Modelling Education in Disruptive Times Hans-Stefan Siller, Vince Geiger, Gabriele Kaiser, 2024-06-03 This edited volume documents research on mathematical modelling education before, during and after the Covid 19 pandemic. Mathematical modelling is essential for understanding natural and human generated phenomena and informs decision making about events such as the pandemic, climate change and other disruptive events. Communication to the public often by the media makes use of mathematical modelling to justify changes to public policy as seen during the COVID 19 crisis. Consequently, mathematical modelling has assumed an increasingly prominent role in curricula internationally, providing opportunities to understand how it is used in current circumstances and to plan for the needs of future societies. This book focuses on research on mathematical modelling education and its implementation at school and tertiary level. Contributions to the book point to directions for further innovation in mathematical modelling education. Authors of this volume are members of the International Community of Teachers of Mathematical Modelling, the peak research body for the teaching and learning of mathematical modelling. A
