Abstract

Based on the HVZ theorem, the absence of embedded single-particle eigenvalues and dilation analyticity of the pseudorelativistic no-pair Jansen-Hess operator, it is proven that for subcritical central charge Z there is no singular continuous spectrum in $\mathbb{R} \setminus [\Sigma_0, 2\alpha]$. Moreover, for the two-particle Brown-Ravenhall operator, the absence of eigenvalues above 2α is shown (if $Z \leq 50$).

Electronic Information and Communication in Mathematics Fengshan Bai,Bernd Wegner,2003-09-03 This book constitutes the thoroughly refereed post proceedings of the ICM 2002 International Satellite Conference on Electronic Information and Communication in Mathematics held in Beijing China in August 2002 The 18 revised and reviewed papers assess the state of the art of the production and dissemination of electronic information in mathematics Among the topics addressed are models and standards for information and metainformation representation data search discovery retrieval and analysis access to distributed and heterogeneous digital collections intelligent user interfaces to digital libraries information agents and cooperative work on mathematical data digital collection generation business models and data security and protection Research and Advanced Technology for Digital Libraries Jose Borbinha,Thomas Baker,2003-06-26 ECDL2000 the Fourth European Conference on Research and Advanced Technology for Digital Libraries is being held this year in Lisbon Portugal following previous events in Pisa 1997 Heraklion 1998 and Paris 1999 One major goal of the ECDL conference series has been to draw information professionals stakeholders and user communities from both the research world and from industry into a discussion of the alternative technologies policies and scenarios for global digital libraries The success of previous conferences makes them a hard act to follow The field of digital libraries draws on a truly diverse set of scientific and technical disciplines In the past three years moreover global cooperation on research and development has emerged as an urgent priority particularly in the new European Framework Programme and in the Digital Library Initiative in the United States Because of this diversity the field is perhaps still struggling for an identity But this struggle for identity is itself a source of energy and creativity Participants in this field feel themselves to be part of a special community with special people Each of

us may claim expertise on a narrow issue with specific projects but the choices we make and the methods we use in local solutions can have unforeseen impacts within a growing universe of interconnected resources

Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Recent Advances in Partial Differential Equations, Venice 1996 Peter D. Lax, L. Nirenberg, Renato Spigler, 1998 Lax and Nirenberg are two of the most distinguished mathematicians of our times Their work on partial differential equations PDEs over the last half century has dramatically advanced the subject and has profoundly influenced the course of mathematics A huge part of the development in PDEs during this period has either been through their work motivated by it or achieved by their postdocs and students A large number of mathematicians honored these two exceptional scientists in a week long conference in Venice June 1996 on the occasion of their 70th birthdays This volume contains the proceedings of the conference which focused on the modern theory of nonlinear PDEs and their applications Among the topics treated are turbulence kinetic models of a rarefied gas vortex filaments dispersive waves singular limits and blow up solutions conservation laws Hamiltonian systems and others The conference served as a forum for the dissemination of new scientific ideas and discoveries and enhanced scientific communication by bringing together such a large number of scientists working in related fields The event allowed the international mathematics community to honor two of its outstanding members

Statistical Mechanics of Nonequilibrium Liquids Denis J. Evans, Gary Morriss, 2008-05-08 In recent years the interaction between dynamical systems theory and non equilibrium statistical mechanics has been enormous The discovery of fluctuation theorems as a fundamental structure common to almost all non equilibrium systems and the connections with the free energy calculation methods of Jarzynski and Crooks have excited both theorists and experimentalists This graduate level book charts the development and theoretical analysis of molecular dynamics as applied to equilibrium and non equilibrium systems Designed for both researchers in the field and graduate students of physics it connects molecular dynamics simulation with the mathematical theory to understand non equilibrium

steady states It also provides a link between the atomic nano and macro worlds The book ends with an introduction to the use of non equilibrium statistical mechanics to justify a thermodynamic treatment of non equilibrium steady states and gives a direction to further avenues of exploration
