Algorithmic Principles of Mathematical Programming Ulrich Faigle, W. Kern, G. Still, 2013-04-17 Algorithmic Principles of Mathematical Programming investigates the mathematical structures and principles underlying the design of efficient algorithms for optimization problems Recent advances in algorithmic theory have shown that the traditionally separate areas of discrete optimization linear programming and nonlinear optimization are closely linked This book offers a comprehensive introduction to the whole subject and leads the reader to the frontiers of current research The prerequisites to use the book are very elementary All the tools from numerical linear algebra and calculus are fully reviewed and developed Rather than attempting to be encyclopedic the book illustrates the important basic techniques with typical problems The focus is on efficient algorithms with respect to practical usefulness Algorithmic complexity theory is presented with the goal of helping the reader understand the concepts without having to become a theoretical specialist Further theory is outlined and supplemented with pointers to the relevant literature Handbooks in Operations Research and Management Science K. Aardal, George L. Nemhauser, R. Weismantel, 2005-12-08 The chapters of this Handbook volume cover nine main topics that are representative of recent theoretical and algorithmic developments in the field In addition to the nine papers that present the state of the art there is an article on the early history of the field The handbook will be a useful reference to experts in the field as well as students and others who want to learn about discrete optimization

Algorithms and Model Formulations in Mathematical Programming Stein W. Wallace, 2012-12-06 The NATO Advanced Research Workshop ARW Algorithms and Model Formulations in Mathematical Programming was held at Chr Michelsen Institute in Bergen Norway from June 15 to June 19 1987 The ARW was organized on behalf of the Committee on Algorithms COAL of the Mathematical Programming Society MPS Co directors were Jan Telgen Van Dien Co Organisatie Utrecht The Netherlands and Roger J B Wets The University of California at Davis USA 43 participants from 11 countries attended the ARW The workshop was organized such that each day started with a minute keynote presentation followed by a 45 minute plenary discussion The first part of this book contains the contributions of the five keynote speakers The plenary discussions were taped and the transcripts given to the keynote speakers They have treated the transcripts differently some by working the discussions into their papers others by adding a section which sums up the discussions The plenary discussions were very interesting and stimulating due to active participation of the audience The five keynote speakers were asked to view the topic of the workshop the interaction between algorithms and model formulations from different

perspectives On the first day of the workshop Professor Alexander H G Rinnooy Kan Erasmus University Rotterdam The Netherlands put the theme into a larger context by his talk Mathematical programming as an intellectual activity This is an article of importance to any mathematical programmer who is interested in his field s history and present state

Mathematical Programming Michel Minoux,1986 This comprehensive work covers the whole field of mathematical programming including linear programming unconstrained and constrained nonlinear programming nondifferentiable or nonsmooth optimization integer programming large scale systems optimization dynamic programming and optimization in infinite dimensions Special emphasis is placed on unifying concepts such as point to set maps saddle points and perturbations functions duality theory and its extensions

Model Solving in Mathematical Programming H. P. Williams,1993-04-13 Uses numerical examples with commentary on the nature of applications Definitions are introduced in context and examples are intended to motivate discussion as well as aid in understanding Concentrates on methods for solving the general models of linear separable nonlinear and integer programming along with their practical computer implementation Numerical examples are sufficiently small to be solvable by hand

Practical Optimization Methods M. Asghar Bhatti,2012-12-06 The goal of this book is to present basic optimization theory and modern computational algorithms in a concise manner The book is suitable for undergraduate and graduate students in all branches of engineering operations research and management information systems The book should also be use ful for practitioners who are interested in learning optimization and using these techniques on their own Most available books in the field tend to be either too theoretical or present computational algorithms in a cookbook style An approach that falls some where in between these two extremes is adopted in this book Theory is presented in an informal style to make sense to most undergraduate and graduate students in engineering and business Computational algorithms are also developed in an informal style by appealing to readers intuition rather than mathematical rigor The available computationally oriented books generally present algorithms alone and expect readers to perform computations by hand or implement these algorithms by themselves This obviously is unrealistic for a usual introductory optimization course in which a wide variety of optimization algorithms are discussed There are some books that present programs written in traditional computer languages such as Basic FORTRAN or Pascal These programs help with computations but are of limited value in developing understanding of the algorithms because very little information about the intermediate steps v Preface VI is presented
