This book gathers selected research papers presented at the Sixth International Conference on Communication and Intelligent Systems ICCIS 2024 organized by Maulana Azad National Institute of Technology MANIT Bhopal India during November 8-9, 2024. This book presents a collection of state-of-the-art research work involving cutting-edge technologies for communication and intelligent systems. Over the past few years, advances in artificial intelligence and machine learning have sparked new research efforts around the globe which explore novel ways of developing intelligent systems and smart communication technologies. The book presents single and multi-disciplinary research on these themes to make the latest results available in a single, readily accessible source. The work is presented in four volumes: **Planning: Perspectives. Forecasting. Organizational approaches. Useful tools**, 1975; **Forecasting School Population** Fred Engelhardt, 1925.

**Practical Techniques of Sales Forecasting** Robert S. Reichard, 1966; **Progress of Cybernetics: Cybernetics and natural sciences. The Wiley Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians, and scientists. This book, it must be said, lives up to the words on its advertising cover: Bridging the gap between introductory descriptive approaches and highly advanced theoretical treatises, it provides a practical, intermediate level discussion of a variety of forecasting tools and explains how they relate to one another both in theory and practice. It does just that. Journal of the Royal Statistical Society A well-written work that deals with statistical methods and models that can be used to produce short-term forecasts, this book has wide-ranging applications. It could be used in the context of a study of regression, forecasting, and time series analysis by PhD students or to support a concentration in quantitative methods for MBA students or as a work in applied statistics for advanced undergraduates. Choice: Statistical Methods for Forecasting is a comprehensive, readable treatment of statistical methods and models used to produce short-term forecasts. The interconnections between the forecasting models and methods are thoroughly explained and the gap between theory and practice is successfully bridged. Special topics are discussed, such as transfer function modeling, Kalman filtering, state space models, Bayesian forecasting, and methods for forecast evaluation, comparison, and control. The book provides time series autocorrelation and partial autocorrelation plots as well as examples and exercises using real data. Statistical Methods for Forecasting serves as an outstanding textbook for advanced undergraduate and graduate courses in statistics, business engineering, and the social sciences, as well as a working reference for professionals in business, industry, and government. **Exploring Management** John R.
