Mathematics In Process:

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today. Who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy. Editorial Advisory Board: Andrew Aberdein (Florida Institute of Technology, USA), Jody Azzouni (Tufts University, USA), Otávio Bueno (University of Miami, USA), William Byers (Concordia University, Canada), Carlo Cellucci (Sapienza University of Rome, Italy), Chandler Davis (University of Toronto, Canada), 1926-2022, Paul Ernest (University of Exeter, UK), Michele Friend (George Washington University, USA), Reuben Hersh (University of New Mexico, USA), 1927-2020, Kyeong Hwa Lee (Seoul National University, South Korea), Yuri Manin (Max Planck Institute for Mathematics, Germany), 1937-2023, Athanase Papadopoulos (University of Strasbourg, France), Ulf Persson (Chalmers University of Technology, Sweden), John Stillwell (University of San Francisco, USA), David Tall (University of Warwick, UK), 1941-2024. This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject, about the role of abstraction, of proof, and manners of proof, about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover, from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersh, and Yuri Manin. Barry Mazur (Harvard University, Professor Emeritus), Gerhard Gade (University of Göttingen, Germany). This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate. John Stillwell (Emeritus Professor of Mathematics, University of San Francisco, Recipient of the 2005 Chauvenet Prize). Dedicating a volume to the memory of three mathematicians, Chandler Davis, Reuben Hersh, and Yuri Manin, who went out of their way to show to a broader audience that mathematics is more than what they might think, is an excellent initiative. The Construction of New Mathematical Knowledge in Classroom Interaction Heinz Steinbring, 2006-03-30 Mathematics is generally considered as the only science where knowledge is uniform universal and free from contradictions Mathematics is a social product a net of norms as Wittgenstein writes In contrast to other institutions traffic rules legal systems or table manners which are often internally contradictory and are hardly ever unrestrictedly accepted mathematics is distinguished by coherence and consensus Although mathematics is presumably the discipline which is the most differentiated internally the corpus of mathematical knowledge constitutes a coherent whole The consistency of mathematics cannot be proved yet so far no contradictions were found that would question the uniformity of mathematics Heintz 2000 p 11 The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge In an extensive study Bettina Heintz Heintz 2000 proposed that the historical development of formal mathematical proof was in fact a means of establishing a communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a coordinated and unequivocal way
