Mathematics and CAD Y. Gardan, 1985-06-30 The use of computer aided design CAD systems always involves the introduction of mathematical concepts It is important therefore for any systems designer to have a good grasp of the mathematical bases used in CAD The choice of mathematical models in a system also has an effect on the overall quality although this effect may not always be visible to the final user Depending on whether Bezier or B spline functions are used for curves and surfaces for example the final user even if not a computer scientist will notice a difference If for example one of the control points is modified by the user in a Bezier type representation the curve or surface will tend to be modified overall but in a B spline representation the curve or surface will tend to be modified close to the point and there only More possibly harmful however is the effect of the mathematical model which has a number of properties invisible and unknown to the final user In every case a model must be chosen with it is hoped the most appropriate characteristics and limits for the task in hand Applied Mechanics Reviews ,1986 **Mathematics and CAD.** Yvon Gardan, 1985 Subject Guide to Books in Print ,1991 Scientific and Technical Aerospace Reports ,1995 *Distributed Computer-Aided Engineering* Hojjat Adeli, Sanjay Kumar, 2020-09-23 Networking of personal computers and workstations is becoming commonplace in academic and industrial environments A cluster of workstations provides engineers with a familiar cost effective environment for high performance computing However workstations often have no dedicated link and communicate slowly on a local area network LAN such as the Ethernet Thus to effectively harness the parallel processing or distributed computing capabilities of workstations new algorithms need to be developed with a higher computation to communication ratio Distributed Computer Aided Engineering presents distributed algorithms for three fundamental areas finite element analysis design optimization and visualization providing a new direction in high performance structural engineering computing **The Publishers' Trade List Annual** ,1991 **SIAM Journal on Scientific Computing** ,2009 *Notices of the American Mathematical Society* American Mathematical Society, 1992 **AIAA Journal** American Institute of Aeronautics and Astronautics, 2007 *Electronics* ,1967 June issues 1941 44 and Nov issue 1945 include a buyers guide section **Numerical Methods in Scientific Computing** Germund Dahlquist, Ake Björck, 2008-01-01 This new book from the authors of the classic book *Numerical methods* addresses the increasingly important role of numerical methods in science and engineering More cohesive and comprehensive than any other modern textbook in the field it combines traditional and well developed topics with other material that is rarely found in numerical analysis texts such as interval arithmetic elementary functions operator series convergence acceleration and continued fractions Although this volume is self contained more comprehensive treatments of matrix computations will be given in a forthcoming volume A supplementary Website contains three appendices an introduction to matrix computations a description of Mulprec a MATLAB multiple precision package and a guide to literature algorithms and software in numerical analysis Review questions problems and computer exercises are also
