## Measure Me:

**Classical and Modern Integration Theories** Ivan N. Pesin, 2014-07-03 Classical and Modern Integration Theories discusses classical integration theory particularly that part of the theory directly associated with the problems of area The book reviews the history and the determination of primitive functions beginning from Cauchy to Daniell The text describes Cauchy's definition of an integral Riemann's definition of the R integral the upper and lower Darboux integrals The book also reviews the origin of the Lebesgue Young integration theory and Borel's postulates that define measures of sets W H Young's work provides a construction of the integral equivalent to Lebesgue's construction with a different generalization of integrals leading to different approaches in solutions Young's investigations aim at generalizing the notion of length for arbitrary sets by means of a process which is more general than Borel's postulates The text notes that the Lebesgue measure is the unique solution of the measure problem for the class of L measurable sets The book also describes further modifications made into the Lebesgue definition of the integral by Riesz Pierpont Denjoy Borel and Young These modifications bring the Lebesgue definition of the integral closer to the Riemann or Darboux definitions as well as to have it associated with the concepts of classical analysis The book can benefit mathematicians students and professors in calculus or readers interested in the history of classical mathematics
