Measures Of Noncompactneb And Condensing Operators:

Measures of Noncompactness and Condensing Operators R. R. Akhmerov, 1992 **Measures of Noncompactness and Condensing Operators** Akhmerov, Kamenskii, Potapov, Rodkina, Sadovskii, 2013-11-21 A condensing or densifying operator is a mapping under which the image of any set is in a certain sense more compact than the set itself. The degree of noncompactness of a set is measured by means of functions called measures of noncompactness. The contractive maps and the compact maps i.e. in this Introduction the maps that send any bounded set into a relatively compact one in the main text the term compact will be reserved for the operators that in addition to having this property are continuous i.e. in the authors terminology for the completely continuous operators are condensing. For contractive maps one can take as measure of noncompactness the diameter of a set while for compact maps can take the indicator function of a family of non relatively compact sets. The operators of the form $F(x)G(x)x$ where G is contractive in the first argument and compact in the second are also condensing with respect to some natural measures of noncompactness. The linear condensing operators are characterized by the fact that almost all of their spectrum is included in a disc of radius smaller than one. The examples given above show that condensing operators are a sufficiently typical phenomenon in various applications of functional analysis for example in the theory of differential and integral equations. As it turns out the condensing operators have properties similar to the compact ones. [Sequence Spaces and Measures of Noncompactness with Applications to Differential and Integral Equations](#) Józef Banaś, Mohammad Mursaleen, 2014-07-18 This book deals with the study of sequence spaces matrix transformations measures of noncompactness and their various applications. The notion of measure of noncompactness is one of the most useful ones available and has many applications. The book discusses some of the existence results for various types of differential and integral equations with the help of measures of noncompactness. In particular the Hausdorff measure of noncompactness has been applied to obtain necessary and sufficient conditions for matrix operators between BK spaces to be compact operators. The book consists of eight self contained chapters. Chapter 1 discusses the theory of FK spaces and Chapter 2 various duals of sequence spaces which are used to characterize the matrix classes between these sequence spaces FK and BK spaces in Chapters 3 and 4. Chapter 5 studies the notion of a measure of noncompactness and its properties. The techniques associated with measures of noncompactness are applied to characterize the compact matrix operators in Chapters 6. In Chapters 7 and 8 some of the existence results are discussed for various types of differential and integral equations which are obtained with the help of argumentations based on compactness conditions.

Measure of Noncompactness, Fixed Point Theorems, and Applications S. A. Mohiuddine, M. Mursaleen, Dragan S. Djordjević, 2024-04-24 The theory of the measure of noncompactness has proved its significance in various contexts particularly in the study of fixed point theory differential equations functional equations integral and integrodifferential equations optimization and others. This edited volume presents the recent developments in the theory of the measure of

noncompactness and its applications in pure and applied mathematics. It discusses important topics such as measures of noncompactness in the space of regulated functions, application in nonlinear infinite systems of fractional differential equations and coupled fixed point theorem. Key Highlights: Explains numerical solution of functional integral equation through coupled fixed point theorem, measure of noncompactness and iterative algorithm. Showcases applications of the measure of noncompactness and Petryshyn's fixed point theorem. functional integral equations in Banach algebra. Explores the existence of solutions of the implicit fractional integral equation via extension of the Darbo's fixed point theorem. Discusses best proximity point results using measure of noncompactness and its applications. Includes solvability of some fractional differential equations in the Holder space and their numerical treatment via measures of noncompactness. This reference work is for scholars and academic researchers in pure and applied mathematics.

Positive Operators and Fixed-Point Theorems with Applications S. A. Mohiuddine, Anupam Das, Dragan S. Djordjević, 2025-05-29. This book presents original research on the theory of positive operators alongside fixed point theorems and their diverse applications. It introduces various positive operators and explores their approximation properties including Korovkin type theorems, Voronovskaja type results, convergence rate and other related findings. Additionally, the book addresses the existence of solutions for various differential and integral equations in different Banach spaces by using Darbo type fixed point theorems. This book also presents an interplay between positive operators and fixed point theory. Each chapter is self-contained, addressing a current problem and outlining solutions and potential applications. The chapters provide sufficient background to ensure that new definitions and results can be understood independently.

Mathematical Analysis of Infectious Diseases Praveen Agarwal, Juan J. Nieto, Delfim F.M. Torres, 2022-06-01. Mathematical Analysis of Infectious Diseases updates on the mathematical and epidemiological analysis of infectious diseases. Epidemic mathematical modeling and analysis is important not only to understand disease progression but also to provide predictions about the evolution of disease. One of the main focuses of the book is the transmission dynamics of the infectious diseases like COVID 19 and the intervention strategies. It also discusses optimal control strategies like vaccination and plasma transfusion and their potential effectiveness on infections using compartmental and mathematical models in epidemiology like SI, SIR, SICA and SEIR. The book also covers topics like biodynamic hypothesis and its application for the mathematical modeling of biological growth and the analysis of infectious diseases mathematical modeling and analysis of diagnosis rate effects and prediction of viruses data driven graphical analysis of epidemic trends, dynamic simulation and scenario analysis of the spread of diseases and the systematic review of the mathematical modeling of infectious disease like coronaviruses. Offers analytical and numerical techniques for virus models. Discusses mathematical modeling and its applications in treating infectious diseases or analyzing their spreading rates. Covers the application of differential equations for analyzing disease problems. Examines probability distribution and bio mathematical applications.

Advances in Nonlinear Analysis via the Concept of Measure of

Noncompactness Józef Banaś, Mohamed Jleli, Mohammad Mursaleen, Bessem Samet, Calogero Vetro, 2017-04-25 This book offers a comprehensive treatment of the theory of measures of noncompactness. It discusses various applications of the theory of measures of noncompactness in particular by addressing the results and methods of fixed point theory. The concept of a measure of noncompactness is very useful for the mathematical community working in nonlinear analysis. Both these theories are especially useful in investigations connected with differential equations, integral equations, functional integral equations and optimization theory. Thus one of the book's central goals is to collect and present sufficient conditions for the solvability of such equations. The results are established in miscellaneous function spaces and particular attention is paid to fractional calculus.

Nonlinear Functional Analysis in Banach Spaces and Banach Algebras Aref Jeribi, Bilel Krichen, 2015-08-14 Uncover the Useful Interactions of Fixed Point Theory with Topological Structures. Nonlinear Functional Analysis in Banach Spaces and Banach Algebras Fixed Point Theory under Weak Topology for Nonlinear Operators and Block Operator Matrices with Applications is the first book to tackle the topological fixed point theory for block operator matrices.

w **Advanced Functional Analysis** Eberhard Malkowsky, Vladimir Rakočević, 2019-02-25 Functional analysis and operator theory are widely used in the description, understanding and control of dynamical systems and natural processes in physics, chemistry, medicine and the engineering sciences. Advanced Functional Analysis is a self-contained and comprehensive reference for advanced functional analysis and can serve as a guide for related research. The book can be used as a textbook in advanced functional analysis, which is a modern and important field in mathematics for graduate and postgraduate courses and seminars at universities. At the same time it enables the interested readers to do their own research. Features: Written in a concise and fluent style. Covers a broad range of topics. Includes related topics from research.

Sequence Space Theory with Applications S. A. Mohiuddine, Bipan Hazarika, 2022-07-20 The book features original chapters on sequence spaces involving the idea of ideal convergence, modulus function, multiplier sequences, Riesz mean, Fibonacci difference matrix, etc. and illustrate their involvement in various applications. The preliminaries have been presented in the beginning of each chapter and then the advanced discussion takes place so it is useful for both expert and non-expert on aforesaid topics. The book consists of original thirteen research chapters contributed by the well-recognized researchers in the field of sequence spaces with associated applications. Features: Discusses the Fibonacci and vector-valued difference sequence spaces. Presents the solution of Volterra integral equation in Banach algebra. Discusses some sequence spaces involving invariant mean and related to the domain of Jordan totient matrix. Presents the Tauberian theorems of double sequences. Discusses the paranormed Riesz difference sequence space of fractional order. Includes a technique for studying the existence of solutions of infinite system of functional integro-differential equations in Banach sequence spaces. The subject of book is an active area of research of present time internationally and would serve as a good source for researcher and educators involved with the topic of sequence spaces.
