Measuring And Improving Infrastructure Performance:

Measuring and Improving Infrastructure Performance National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Measuring and Improving Infrastructure Performance, 1995-01-01 The nation's physical infrastructure facilitates movement of people and goods, provides safe water, provides energy when and where needed, removes wastes, enables rapid communications, and generally supports our economy and quality of life. Developing a framework for guiding attempts at measuring the performance of infrastructure systems and grappling with the concept of defining good performance are the major themes of this book. Focusing on urban regions within a context of national policy, the volume provides the basis for further in-depth analysis and application at the local, regional, state, and national levels.

Infrastructure Planning and Finance Vicki Elmer, Adam Leigland, 2013-11-07 Infrastructure Planning and Finance is a non-technical guide to the engineering planning and financing of major infrastructure projects in the United States, providing both step-by-step guidance and a broad overview of the technical, political, and economic challenges of creating lasting infrastructure in the 21st Century. Infrastructure Planning and Finance is designed for the local practitioner or student who wants to learn the basics of how to develop an infrastructure plan, a program, or an individual infrastructure project. A team of authors with experience in public works planning and city government explain the history and economic environment of infrastructure and capital planning, addressing common tools like the comprehensive plan, sustainability plans, and local regulations. The book guides readers through the preparation and development of comprehensive plans and infrastructure projects and through major funding mechanisms from bonds, user fees, and impact fees to privatization and competition. The rest of the book describes the individual infrastructure systems, their elements, current issues, and a how-to-do-it section that covers the system and the comprehensive plan development, regulations, and how it can be financed. Innovations such as decentralization, green and blue green technologies are described, as well as local policy actions to achieve a more sustainable city. Other addressed chapters include water, wastewater, solid waste, streets, transportation, airports, ports, community facilities, parks, schools, energy, and telecommunications. Attention is given to how local policies can ensure a sustainable and climate friendly infrastructure system and how planning for them can be integrated across disciplines.

Forum on Key National Indicators, 2004-03 On Feb 27, 2003, the General Accounting Office (GAO) in cooperation with the National Academies hosted a forum on key national indicators. The purpose of the forum was to have a rich and meaningful dialogue on whether and how to develop a set of key national indicators for the U.S. The forum brought together a diverse group of national leaders to discuss the following: How are the world's leading democracies measuring national performance? What might the U.S. do to improve its approach and why? What are important areas to measure in assessing U.S. national performance? How might new U.S. approaches be led and implemented? Charts and tables.
