Measuring Empowerment:

Measuring Empowerment Deepa Narayan-Parker, 2005-01-01 Large scale poverty reduction depends on the effective empowerment of poor people themselves This publication sets out a conceptual framework that can be used to monitor and evaluate empowerment programmes based on papers written by practitioners and researchers in a wide variety of fields including economics and political science sociology and psychology anthropology and demography These papers draw on research and practical experience at different levels from households to communities to nations and in various regions of the world

Measuring Empowerment in Practice Ruth Alsop, Nina Heinsohn, 2005 Alsop and Heinsohn present an analytic framework that can be used to measure and monitor empowerment processes and outcomes The measuring empowerment framework rooted in both conceptual discourse and measurement practice illustrates how to gather data on empowerment and structure its analysis The framework can be used to measure empowerment at both the intervention level and the country level as a part of poverty or governance monitoring The authors first provide a definition of empowerment and then explain how the concept can be reduced to measurable components Empowerment is defined as a person's capacity to make effective choices that is the capacity to transform choices into desired actions and outcomes The extent or degree to which a person is empowered is influenced by personal agency the capacity to make purposive choice and opportunity structure the institutional context in which choice is made Asset endowments are used as indicators of agency These assets may be psychological informational organizational material social financial or human Opportunity structure is measured by the presence and operation of formal and informal institutions including the laws regulatory frameworks and norms governing behavior Degrees of empowerment are measured by the existence of choice the use of choice and the achievement of choice Following the conceptual discussion and the presentation of the analytic framework the authors show how the measuring empowerment framework can be applied using examples from four development interventions Each example discusses how the framework guided analysis and development of empowerment indicators They also present a draft module for measuring empowerment at the country level The module can be used alone or be integrated into country level poverty or governance monitoring systems that seek to add an empowerment dimension to their analysis This paper a product of the Poverty Reduction Group Poverty Reduction and Economic Management Network is part of a larger effort in the network to conceptualize operationalize and measure empowerment Abstract

Context Sensitive Health Informatics: Redesigning Healthcare Work Craig E. Kuziemy, Zoie Shui-Yee Wong, 2017-08-15 Health informatics applications will be a cornerstone of the next generation healthcare delivery system These applications will support the delivery of safe patient centered care and collaborative care delivery The complexity of modern healthcare is delivered by many different specialties to many different patients with complex diseases and comorbidity A one size fits all approach is not adequate to reach the triple aim of improving the patient experience of care improving the health of populations and reducing the per capita cost of healthcare Health informatics applications must rather be built to be adaptable and sensitive to the complex contexts where they will be used The health informatics community has long been interested in the role that context plays in the design implementation and evaluation of Health IT We have come to realize that context is not just a passive characteristic that impacts Health IT usage but rather is embedded in the core of the users processes and outcomes that Health IT interacts with Therefore we need better approaches to study and understand its impact on Health IT usage in different healthcare settings This book contains the conference papers from CSHI 2017 Delivering 21st Century Healthcare Building a Quality and Efficiency Driven System It contains papers on a variety of topics that are divided into four sections Theoretical approaches to investigate context sensitive health informatics to generate robust evidence Redesigning healthcare work practices Patient participation in healthcare design and redesign and Human factors and usability The 2017 CSHI conference continues our efforts to develop robust scientific evidence on context and Health IT
