technique of the eighteenth century musicians were expected to generate sentiments in themselves while playing then communicate them to the audience through bodily motions Voskuhl argues contrary to much of the subsequent scholarly conversation that these automata were unique masterpieces that illustrated the sentimental culture of a civil society rather than expressions of anxiety about the mechanization of humans by industrial technology She demonstrates that only in a later age of industrial factory production did mechanical androids instill the fear that modern selves and societies had become indistinguishable from machines A Checklist of Automatic Musical Instruments Clemens von Gleich,1989 **Zeitschrift**
