Mechanism and the Novel Martha A. Turner, 1993-09-09 Martha Turner's 1993 book examines the relationship between British fiction and the tradition of mechanistic science derived from Isaac Newton and provides a bridge between the mechanical philosophy of the eighteenth century and present day habits of thought Tracing the evolution of the concept of mechanism among science writers and novelists of the past 200 years it shows how the pre mechanistic world of *Pride and Prejudice* and the relatively unproblematic empiricism of *The Bride of Lammermoor* were succeeded by the quandaries of *Bleak House* *The Ordeal of Richard Feverel* and *The Egoist* and how alternatives to the mechanistic tradition were worked out in *The Secret Agent* and *Women in Love* Analysis of Doris Lessing's *Canopus in Argos* Archives identifies features of the tradition which still survive Women, the Novel, and Natural Philosophy, 1660-1727 K. Gevirtz, 2014-03-06 This book shows how early women novelists from Aphra Behn to Mary Davys drew on debates about the self generated by the scientific revolution to establish the novel as a genre Fascinated by the problematic idea of a unified self underpinning modes of thinking female novelists innovated narrative structures to interrogate this idea *Transformations of Electricity in Nineteenth-Century Literature and Science* Stella Pratt-Smith, 2017-05-15 Throughout the nineteenth century practitioners of science writers of fiction and journalists wrote about electricity in ways that defied epistemological and disciplinary boundaries Revealing electricity as a site for intense and imaginative Victorian speculation Stella Pratt Smith traces the synthesis of nineteenth century electricity made possible by the powerful combination of science literature and the popular imagination With electricity resisting clear description even by those such as Michael Faraday and James Clerk Maxwell who knew it best Pratt Smith argues that electricity was both metaphorically suggestive and open to imaginative speculation Her book engages with Victorian scientific texts popular and specialist periodicals and the work of leading midcentury novelists including Charles Dickens Charlotte Bronte Emily Bronte William Makepeace Thackeray and Wilkie Collins Examining the work of William Harrison Ainsworth and Edward Bulwer Lytton Pratt Smith explores how Victorian novelists attributed magical qualities to electricity imbuing it with both the romance of the past and the thrill of the future She concludes with a case study of Benjamin Lumley's *Another World* which presents an enticing fantasy of electricity's potential based on contemporary developments Ultimately her book contends that writing and reading about electricity appropriated and expanded its imaginative scope transformed its factual origins and applications and contravened the bounds of literary genres and disciplinary constraints *Textual Practice* Terence Hawkes, Jean Howard, 2005-07-19 First published in 1994 Routledge is an imprint of Taylor Francis an informa company **Hardy, Conrad and the Senses** Hugh Epstein, 2019-11-12 This book reads the highly descriptive impressionist writings of Hardy and Conrad together in the light of a shared attention to sight and sound **Notes and Queries**, 1994 **The Dickensian**, 1994 **An Annotated Bibliography of Jane Austen Studies, 1984-94** Barry Roth, 1996 This Professor Roth's third annotated bibliography of

studies on Jane Austen covers the years 1984-1994. Like the critically acclaimed earlier volumes it charts the steady growth and enrichment of literary criticism of Austen in the second half of the twentieth century. The first bibliography which covered the period 1952-1972 contained 794 items; the second which treated 1973-1983 included over 1,060 pieces; this third work has 1,327 entries. Such concentrated attention paid to this major English novelist shows signs only of intensifying for fresh illuminating interpretations continue to appear at a rapid pace. This bibliography serves as a scholarly tool locating and summarizing research so as to establish the present state of our knowledge of Austen studies and to assist others in proceeding as fully informed as possible of past efforts. This third bibliography includes all Austen studies first published in the period 1984-1994, more particularly every book, essay, article and doctoral dissertation on her as well as the critical matter appended to every edition of her works in English and to translations and significant mentions. For clarity and ease of reference the bibliography is divided into three main sections. The first covers books, essays and articles devoted entirely or in good part to Austen including reviews of all the book-length studies. The second section focuses on doctoral dissertations wholly or in part about her. The third gathers together significant mentions included regardless of length when they entail an unusual perceptive or otherwise striking idea. Austen followers everywhere will welcome Roth's thorough research and systematic presentation.

"*But Truth is Ever Incoherent* --" Astrid Recker, 2008. Focusing on the critical notions of disunity and incoherence so frequently raised in discussions of Moby Dick, the study argues that Melville's 1851 novel depicts two radically different realities governed by principles of continuity and discontinuity respectively, each of which is associated with one of the novel's main protagonists. Based on the assumption that Ahab's world exhibits the same continuities as the cosmos conceptualized by classical physics, this study proposes to regard the captain not as mad but as a Newtonian subject whose central beliefs about the world are grounded in the same metaphysics as Newtonian physics. In contrast, Ishmael's world is full of inconsistencies, discontinuities and paradoxes. Beings which populate this heterogeneous multiplicity, in particular the whale which Ishmael attempts to describe and classify, resist all attempts at rendering them continuous. In consequence they are best described with the concept of complementarity which originates in quantum physics and denotes a state of affairs characterized by irreducible discontinuity.
