## **Palmprint Authentication:**

*Palmprint Authentication 8#*, Xingyi Road, Chang Ning District 16/F, Maxdo Center, 2006-04-11 Palmprint Authentication is the first book to provide a comprehensive introduction to palmprint technologies. It reveals automatic biometric techniques for personal identification using palmprint from the approach based on offline palmprint images to the current state of the art algorithm using online palmprint images. Palmprint Authentication provides the reader with a basic concept of Palmprint Authentication. It also includes an in depth discussion of Palmprint Authentication technologies, a detailed description of Palmprint Authentication systems, and an up to date coverage of how these issues are developed. This book is suitable for different levels of readers: those who want to learn more about palmprint technology and those who wish to understand, participate in, and/or develop a palmprint authentication system. Palmprint Authentication is effectively a handbook for biometric research and development. Graduate students and researchers in computer science, electrical engineering, systems science, and information technology will all find it uniquely useful, not only as a reference book but also as a text book. Researchers and practitioners in industry and R D laboratories working in the fields of security system design, biometrics, immigration, law enforcement, control, and pattern recognition will also benefit from this volume. Palmprint Authentication David D. Zhang, 2004-06-15 Palmprint Authentication is the first book to provide a comprehensive introduction to palmprint technologies. Advanced Palmprint Authentication David Zhang, Dandan Fan, Xu Liang, Bob Zhang, 2025-08-11 This book presents a comprehensive exploration of palmprint recognition, synthesizing over a decade of research in contact based, contactless 3D, and multispectral systems. As one of the earliest approaches in biometrics, contact based palmprint systems have evolved significantly, achieving greater portability and accuracy even when handling large scale datasets. In contrast, contactless systems, which allow users to position their palms near the camera without physical contact, offer a hygienic, user friendly alternative that has quickly gained popularity in various applications. Additionally, the advancement of 3D palmprint

recognition and the introduction of cutting edge sensors such as line scan and multicamera systems have further enhanced the accuracy and reliability of these systems This book is structured into 13 chapters divided into three key sections The first part delves into contact based systems emphasizing their growing efficiency and performance in both small devices and large scale scenarios The second part provides in depth coverage of contactless systems detailing essential processes like palmprint acquisition ROI localization feature extraction and matching techniques The third section examines the latest developments in multiple sensing systems focusing on 3D and multispectral recognition Targeted at researchers and engineers in biometrics particularly those specializing in palmprint recognition this book offers valuable insights and practical algorithms for enhancing system performance It is also an excellent resource for readers with a broader interest in biometric technologies offering a rich understanding of the latest trends and innovations in the field      **Touchless**

**Palmprint Recognition Systems** Angelo Genovese,Vincenzo Piuri,Fabio Scotti,2014-09-15 This book examines the context motivation and current status of biometric systems based on the palmprint with a specific focus on touchless and less constrained systems It covers new technologies in this rapidly evolving field and is one of the first comprehensive books on palmprint recognition systems It discusses the research literature and the most relevant industrial applications of palmprint biometrics including the low cost solutions based on webcams The steps of biometric recognition are described in detail including acquisition setups algorithms and evaluation procedures Constraints and limitations of current palmprint recognition systems are analyzed and discussed The authors also introduce innovative methods for touchless and less constrained palmprint recognition with the aim to make palmprint biometrics easier to use in practical daily life applications and overcome the typical constraints and limitations described Touchless Palmprint Recognition Systems targets professionals and researchers working in biometrics image processing and three dimensional reconstruction Advanced level students studying biometrics and computer science will also find this material valuable as a secondary text book or reference

**Computational Science and its Applications** A. H. Siddiqi,R. C. Singh,G. D. Veerappa Gowda,2020-10-20 Computational science is a rapidly growing multidisciplinary field concerned with the design implementation and use of mathematical models to analyze and solve real world problems It is an area of science that spans many disciplines and which involves the development of models and allows the use of computers to perform simulations or numerical analysis to understand problems that are computational and theoretical Computational Science and its Applications provides an opportunity for readers to develop abilities to pose and solve problems that combine insights from one or more disciplines from the natural sciences with mathematical tools and computational skills This requires a unique combination of applied and theoretical knowledge and skills The topics covered in this edited book are applications of wavelet and fractals modeling by partial differential equations on flat structure as well as on graphs and networks computational linguistics prediction of natural calamities and diseases like epilepsy seizure heart attack stroke biometrics modeling through inverse problems interdisciplinary topics of physics mathematics and medical science and modeling of terrorist attacks and human behavior The focus of this book is not to educate computer specialists but to provide readers with a solid understanding of basic science as well as an integrated knowledge on how to use essential methods from computational science Features Modeling of complex systems Cognitive computing systems for real world problems Presentation of inverse problems in medical science and their numerical solutions Challenging research problems in many areas of computational science This book could be used as a reference book for researchers working in theoretical

research as well as those who are doing modeling and simulation in such disciplines as physics biology geoscience and mathematics and those who have a background in computational science Biometric Technology for Human Identification, 2007 **A Modern Approach for Palmprint Recognition System** Shriram Raut, 2012-04 Biometrics is the science of verifying the identity of an individual through physiological measurements or behavioral traits Since biometric identifiers are associated permanently with the user they are more reliable than token or knowledge based authentication methods Palm print identification systems measure and compare ridges lines and minutiae found on the palm Joao de Barros an early explorer and writer wrote that the Chinese merchants distinguished young children from each other by recording palm prints and footprints on paper with ink Palm prints can be used for criminal forensic or commercial applications Biometrics is certainly the most secure form of authentication It s the hardest to imitate and duplicate Avivah Litan Be able to analyze statistics which can be used to support or undercut almost any argument Marilyn vos Savant **Multimodal Surveillance** Zhigang Zhu, 2007 This resource brings together the multimodal surveillance fields leading experts who guide researchers designers engineers and developers through this multifaceted technology It discusses the latest high end sensors for extremely accurate surveillance as well as low cost sensing solutions Advanced Pattern Recognition Technologies with Applications to Biometrics David Zhang, 2009 This book focuses on two kinds of advanced biometric recognition technologies biometric data discrimination and multi biometrics Provided by publisher Information Fusion in Fingerprint Authentication Arun Abraham Ross, 2003 **Annales des télécommunications**, 2007 **Journal of Scientific and Industrial Research**, 2013 *Invariant Object Recognition Based on Elastic Graph Matching* Raymond S. T. Lee, 2003 Object Detection, Classification, and Tracking Technologies Sharath Pankanti, Runsheng Wang, 2001 **Computer Resource Management Technology Program (PE 64740F)**. L. Watson, 1988 **Multibiometric Systems** Karthik Nandakumar, 2008 Multibiometric systems are gaining popularity because they are able to overcome limitations such as non universality noisy sensor data and susceptibility to spoof attacks common in unibiometric systems We address two critical issues in the design of a multibiometric system namely fusion methodology and template security We propose a fusion methodology based on the Neyman Pearson theorem for combination of match scores provided by multiple biometric matchers The likelihood ratio LR test used in the Neyman Pearson theorem directly maximizes the genuine accept rate GAR at any desired false accept rate FAR We extend the likelihood ratio based fusion scheme to incorporate the quality of the biometric samples The LR framework can be used for designing sequential multibiometric systems by constructing a binary decision tree classifier based on the marginal likelihood ratios of the individual matchers The use of image quality information further improves the GAR to 90% at a FAR of 0.001% Next we show that the proposed likelihood ratio based fusion framework is also applicable to a multibiometric system operating in the identification mode We investigate rank level fusion strategies and propose a hybrid scheme that utilizes both ranks and scores to perform fusion in the identification

scenario Fusion of multiple biometric sources requires storage of multiple templates for the same user corresponding to the individual biometric sources Template security is an important issue because stolen biometric templates cannot be revoked We propose a scheme for securing multibiometric templates as a single entity using the fuzzy vault framework We have developed fully automatic implementations of a fingerprint based fuzzy vault that secures minutiae templates and an iris cryptosystem that secures iris code templates We also demonstrate that a multibiometric vault achieves better recognition performance and higher security compared to a unibiometric vault
