Panel Data Analysis:

Econometrics of Panel Data Erik Biørn, 2016-10-13 Panel data is a data type increasingly used in research in economics social sciences and medicine Its primary characteristic is that the data variation goes jointly over space across individuals firms countries etc and time over years months etc Panel data allow examination of problems that cannot be handled by cross section data or time series data Panel data analysis is a core field in modern econometrics and multivariate statistics and studies based on such data occupy a growing part of the field in many other disciplines The book is intended as a text for master and advanced undergraduate courses It may also be useful for PhD students writing theses in empirical and applied economics and readers conducting empirical work on their own The book attempts to take the reader gradually from simple models and methods in scalar simple vector notation to more complex models in matrix notation A distinctive feature is that more attention is given to unbalanced panel data the measurement error problem random coefficient approaches the interface between panel data and aggregation and the interface between unbalanced panels and truncated and censored data sets The 12 chapters are intended to be largely self contained although there is also natural progression Most of the chapters contain commented examples based on genuine data mainly taken from panel data applications to economics Although the book inter alia through its use of examples is aimed primarily at students of economics and econometrics it may also be useful for readers in social sciences psychology and medicine provided they have a sufficient background in statistics notably basic regression analysis and elementary linear algebra Econometric Analysis of Panel Data Badi Baltagi, 2008-06-30 Written by one of the world s leading researchers and writers in the field Econometric Analysis of Panel Data has become established as the leading textbook for postgraduate courses in panel data This new edition reflects the rapid developments in the field covering the vast research that has been conducted on panel data since its initial publication Featuring the most recent empirical examples from panel data literature data sets are also provided as well as the programs to implement the estimation and testing procedures described in the book These programs will be made available via an accompanying website which will also contain solutions to end of chapter exercises that will appear in the book The text has been fully updated with new material on dynamic panel data models and recent results on non linear panel models and in particular work on limited dependent variables panel data models Panel Data Analysis using EViews I. Gusti Ngurah Agung, 2013-12-31 A comprehensive and accessible guide to panel data analysis using EViews software This book explores the use of EViews software in creating panel data analysis using appropriate empirical models and real datasets Guidance is given on developing alternative descriptive statistical summaries for evaluation and providing policy analysis based on pool panel data Various alternative models based on panel data are explored including univariate general linear models fixed effect models and causal models and guidance on the advantages and disadvantages of each one is given Panel Data Analysis using EViews Provides step by step guidance on how to apply EViews software to panel data analysis using appropriate empirical models

and real datasets Examines a variety of panel data models along with the author's own empirical findings demonstrating the advantages and limitations of each model Presents growth models time related effects models and polynomial models in addition to the models which are commonly applied for panel data Includes more than 250 examples divided into three groups of models stacked unstacked and structured panel data together with notes and comments Provides guidance on which models not to use in a given scenario along with advice on viable alternatives Explores recent new developments in panel data analysis An essential tool for advanced undergraduate or graduate students and applied researchers in finance econometrics and population studies Statisticians and data analysts involved with data collected over long time periods will also find this book a useful resource

Essays in Panel Data Econometrics Marc Nerlove,2005-11-10 This volume collects seven of Marc Nerlove's previously published classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey's monograph published in 1861 Since Professor Nerlove's 1966 *Econometrica* paper with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet The best way to formulate statistical models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them The essays illustrate both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods

Applied Panel Data Analysis for Economic and Social Surveys Hans-Jürgen Andreß,Katrin Golsch,Alexander W. Schmidt,2013-01-24 Many economic and social surveys are designed as panel studies which provide important data for describing social changes and testing causal relations between social phenomena This textbook shows how to manage describe and model these kinds of data It presents models

for continuous and categorical dependent variables focusing either on the level of these variables at different points in time or on their change over time It covers fixed and random effects models models for change scores and event history models All statistical methods are explained in an application centered style using research examples from scholarly journals which can be replicated by the reader through data provided on the accompanying website As all models are compared to each other it provides valuable assistance with choosing the right model in applied research The textbook is directed at master and doctoral students as well as applied researchers in the social sciences psychology business administration and economics Readers should be familiar with linear regression and have a good understanding of ordinary least squares estimation

Panel Data Econometrics Donggyu Sul, 2019-02-07 In the last 20 years econometric theory on panel data has developed rapidly particularly for analyzing common behaviors among individuals over time Meanwhile the statistical methods employed by applied researchers have not kept up to date This book attempts to fill in this gap by teaching researchers how to use the latest panel estimation methods correctly Almost all applied economics articles use panel data or panel regressions However many empirical results from typical panel data analyses are not correctly executed This book aims to help applied researchers to run panel regressions correctly and avoid common mistakes The book explains how to model cross sectional dependence how to estimate a few key common variables and how to identify them It also provides guidance on how to separate out the long run relationship and common dynamic and idiosyncratic dynamic relationships from a set of panel data Aimed at applied researchers who want to learn about panel data econometrics by running statistical software this book provides clear guidance and is supported by a full range of online teaching and learning materials It includes practice sections on MATLAB STATA and GAUSS throughout along with short and simple econometric theories on basic panel regressions for those who are unfamiliar with econometric theory on traditional panel regressions

Econometric Analysis of Panel Data Badi H. Baltagi, 2001-10-31 This new edition of this established textbook reflects the rapid developments in the field covering the vast research that has been conducted on panel data since its initial publication The book is packed with the most recent empirical examples from panel data literature and includes new data sets The use of the standard software packages in the field i.e. STATA LIMDEP TSP SAS are illustrated with new examples The text has also been fully updated with new material on non stationary models unit roots in panels and cointegration prediction in panels serial correlation
