The Paralation Model Gary Sabot, 1988 Mathematics of Computing Parallelism *PARLE '92, Parallel Architectures and Languages Europe* Daniel Etiemble, 1992-06-03 The 1992 Parallel Architectures and Languages Europe conference continues the tradition of a wide and representative international meeting of specialists from academia and industry in theory design and application of parallel computer systems set by the previous PARLE conferences held in Eindhoven in 1987 1989 and 1991 This volume contains the 52 regular and 25 poster papers that were selected from 187 submitted papers for presentation and publication In addition five invited lectures are included The regular papers are organized into sections on implementation of parallel programs graph theory architecture optimal algorithms graph theory and performance parallel software components data base optimization and modeling data parallelism formal methods systolic approach functional programming fine grain parallelism Prolog data flow systems network efficiency parallel algorithms cache systems implementation of parallel languages parallel scheduling in data base systems semantic models parallel data base machines and language semantics

Parallel Symbolic Computing: Languages, Systems, and Applications Robert H. Halstead, Takayasu Ito, 1993-11-03 Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications **1993**

Frisby, 1991 3D Model Recognition from Stereoscopic Cues provides a rich integrated account of work done within a large scale multisite Alvey funded collaborative project in computer vision It presents a variety of methods for deriving surface descriptions from stereoscopic data and for matching those descriptions to three dimensional models for the

Abstract Machine Models for Highly Parallel Computers John R. Davy, P. M. Dew, 1995 The papers collected in this volume cover a wide range of issues relevant to abstract models including terminology and concepts for abstract models of computation models for general purpose parallel computing declarative models performance modelling and special purpose parallel models The papers originated from the Second Workshop on Abstract Machine Models for Highly Parallel Computers sponsored by the BCS Parallel Processing Specialist Group Overall themes of the workshop were the specification implementation and application of such models and the identification of key issues for future research **Parallel Processing for Artificial Intelligence** Laveen N. Kanal, 1994 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the parallelization of production systems logic has a purely declarative interpretation which does not demand a particular

evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful formalism for describing natural languages The second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry

Parallel Programming Thomas Bräunl,1993 This introduction to parallel programming explores the fundamentals of parallelism parallel system architecture MIMD and SIMD and parallel programming languages and presents methods for designing parallel algorithms for writing efficient parallel programs and for computing performance data and judging it
