Means To An End The Biological Basis Of Aging And Death:

A Means to an End William R. Clark, 2002 Why do we age Is aging inevitable Will advances in medical knowledge allow us to extend the human lifespan beyond its present limits Because growing old has long been the one irreducible reality of human existence these intriguing questions arise more often in the context of science fiction than science fact But recent discoveries in the fields of cell biology and molecular genetics are seriously challenging the assumption that human lifespans are beyond our control With such discoveries in mind noted cell biologist William R Clark clearly and skillfully describes how senescence begins at the level of individual cells and how cellular replication may be bound up with aging of the entire organism He explores the evolutionary origin and function of aging the cellular connections between aging and cancer the parallels between cellular senescence and Alzheimer's disease and the insights gained through studying human genetic disorders such as Werner's syndrome that mimic the symptoms of aging Clark also explains how reduction in caloric intake may actually help increase lifespan and how the destructive effects of oxidative elements in the body may be limited by the consumption of antioxidants found in fruits and vegetables In a final chapter Clark considers the social and economic aspects of living longer the implications of gene therapy on senescence and what we might learn about aging from experiments in cloning This is a highly readable provocative account of some of the most far reaching and controversial questions we are likely to ask in the next century

Staying Alive Jason K. Swedene, 2009-09-09 Staying Alive explores the desire to live forever which manifests itself in many forms and forums Many throughout history have measured their self worth by the metric of how they will stay alive one wants fame another needs children One wants to leave behind a personalized legacy another wants to leave behind the world and enjoy the bliss of heaven The author's self expressed aim has been simply to write a readable book that will afford the reader an increased sensitivity to the many ways the desire for immortality has shaped history philosophy art and literature The thought that this analysis of human longing and culture provokes transcends any one way of approaching these disciplines It searches for and connects deeply personal pursuits with greater collective trends

The Future of Aging, 2010-07-28 Just as the health costs of aging threaten to bankrupt developed countries this book makes the scientific case that a biological bailout could be on the way and that human aging can be different in the future than it is today Here 40 authors argue how our improving understanding of the biology of aging and selected technologies should enable the successful use of many different and complementary methods for ameliorating aging and why such interventions are appropriate based on our current historical anthropological philosophical ethical evolutionary and biological context Challenging concepts are presented together with in depth reviews and paradigm breaking proposals that collectively illustrate the potential for changing aging as never before The proposals extend from today to a future many decades from now in which the control of aging may become effectively complete Examples include sirtuin modulating pills new concepts for attacking cardiovascular disease and cancer mitochondrial rejuvenation stem cell therapies and

regeneration tissue reconstruction telomere maintenance prevention of immunosenescence extracellular rejuvenation artificial DNA repair and full deployment of nanotechnology The Future of Aging will make you think about aging differently and is a challenge to all of us to open our eyes to the future therapeutic potential of biogerontology Why Are We Here? Bruce Brodie, 2019-05-24 From the big bang to the origin and evolution of intelligent life in a search for the meaning of human existence Why are We Here by author Bruce Brodie offers a look at evolution and the future of life on the planet Through many years of research and study Brodie addresses a host of questions How did chemistry come to life How did the release of oxygen by cyanobacteria change the natural history of life How did mass extinctions reset the clock and reshape the course of biological evolution Why are homo sapiens so dominant Why do humans build vast civilizations while chimps with whom we share more than 98 percent of our DNA are confined to forests and experimental laboratories and zoos How will cultural and technological evolution which have transcended the slow pace of biological evolution shape the future of life on the planet Can we escape the many existential threats that hover over us Why are We Here offers a new perspective on how we think about the world and our place and our purpose in the universe and the future of humanity It presents a lasting sense of the amazing wonder and mystery of life **New Methuselahs** John K. Davis, 2024-03-19 An examination of the ethical issues raised by the possibility of human life extension including its desirability unequal access and the threat of overpopulation Life extension slowing or halting human aging is now being taken seriously by many scientists Although no techniques to slow human aging yet exist researchers have successfully slowed aging in yeast mice and fruit flies and have determined that humans share aging related genes with these species In New Methuselahs John Davis offers a philosophical discussion of the ethical issues raised by the possibility of human life extension Why consider these issues now before human life extension is a reality Davis points out that even today we are making policy and funding decisions about human life extension research that have ethical implications With New Methuselahs he provides a comprehensive guide to these issues offering policy recommendations and a qualified defense of life extension After an overview of the ethics and science of life extension Davis considers such issues as the desirability of extended life whether refusing extended life is a form of suicide the Malthusian threat of overpopulation equal access to life extension and life extension and the right against harm In the end Davis sides neither with those who argue that there are no moral objections to life enhancement nor with those who argue that the moral objections are so strong that we should never develop it Davis argues that life extension is on balance a good thing and that we should fund life extension research aggressively and he proposes a feasible and just policy for preventing an overpopulation crisis Death Philippe Huneman, 2023-02-14 This book addresses several key issues in the biological study of death with the intent of capturing their genealogy the assumptions and presuppositions they make and the way that they open specific new research avenues The book is divided into two sections the first considers physiology and the second evolutionary biology In the first part Huneman reconstructs a conceptual genealogy of experimental physiology based

on an in depth analysis of Bichat s investigations of death processes In the second part he explains that biologists in the late 1950s put forth a research framework that evolutionarily accounts for death in terms of either an effect of the weakness of natural selection or a by product of natural selection for early reproduction He illustrates how the biology of death is a central field and that studying it provides insight into the way that the epistemic structure of this knowledge has been constituted persists until now and may conflict with some traditional philosophical ideas The Mankind Quarterly Council for Social and Economic Studies (U.S.),2001 Genes, Aging, and Immortality Charlotte Spencer,2006 This booklet answers questions about the mysteries of aging and the search for immortality It describes some of the current progress in the scientific study of aging and explores social and ethical questions surrounding the real possibility of human lifespan extension Scientific American ,2002 **Natural History** ,1999 American Book Publishing Record ,1999 **American Scientist** ,1942 **Heredity** ,1947 *International Bibliography of Book Reviews of Scholarly Literature Chiefly in the Fields of Arts and Humanities and the Social Sciences* ,2000 **Subject Guide to Books in Print** ,2001 **Encyclopedia of Life Science** Katherine E. Cullen,2009 An illustrated A Z encyclopedia of facts and information on topics relevant to modern science including the cell biological evolution the behavior of organisms and more *The Publishers Weekly* ,1999 **The British National Bibliography** Arthur James Wells,2003 *Newsweek* ,2001 British Journal of Biomedical Science ,2000
