*Measuring Market Risk with Value at Risk* Pietro Penza, Vipul K. Bansal, 2001 This book *Measuring Market Risk with Value at Risk* by Vipul Bansal and Pietro Penza has three advantages over earlier works on the subject First it takes a decidedly global approach an essential ingredient for any comprehensive work on market risk Second it ties the scientifically grounded yet intuitively appealing VaR measure to earlier more idiosyncratic measures of market risk that are used in specific market environs e g duration in fixed income Finally it encompasses all of the accepted approaches to calculating a VaR measure and presents them in a clearly explained fashion with supporting illustrations and completely worked out examples from the Foreword by John F Marshall PhD Principal Marshall Tucker Associates LLC *Measuring Market Risk with Value at Risk* offers a much needed intellectual bridge a translation from the esoteric realm of mathematical finance to the domain of financial managers who seek guidance in applying developments from this important field of research as well as that of MBA level graduate instruction I believe the authors have done a commendable job of providing a carefully crafted highly readable and most useful work and intend to recommend it to all those involved in business risk management applications Anthony F Herbst PhD Professor of Finance and C R and D S Carter Chair The University of Texas El Paso and Founding editor of *The Journal of Financial Engineering* 1991 1998 Finally there s a book that strikes a balance between rigor and application in the area of risk management in the banking industry This innovative book is a MUST for both novices and professionals alike Robert P Yuyuenyongwatana PhD Associate Professor of Finance Cameron University *Measuring Market Risk with Value at Risk* is one of the most complete discussions of this emerging topic in finance that I have seen The authors develop a logical and rigorous framework for using VaR models providing both historical references and analytical applications Kevin Wynne PhD Associate Professor of Finance Lubin School of Business Pace University

at the Corporate Level Economic Capital and RAROC Chapter Two discusses the meaning of capital and how the risks that a bank faces are related to the amount of capital that the bank should hold It then describes the two fundamental building blocks of integrated risk measurement Economic Capital and Risk Adjusted Return on Capital RAROC Chapter 3 Review of Statistics Chapter Three is useful for those readers who do not have a recent working knowledge of statistics It reviews the statistical relationships that are commonly used in risk measurement and provides reference material for the rest of the book Examples are provided using financial loss data MARKET RISK SECTION Chapter 4 Background on Traded Instruments This chapter gives an overview of the main types of traded instruments bonds equities and derivatives It gives a qualitative description of the instrument examples of calculating the instrument's value and the basic risk metrics such as duration and the Greeks This chapter is useful for those readers who are new to the finance industry Chapter 5 Market Risk Measurement This chapter describes the most common ways to measure market risks Sensitivity analysis Stress testing Scenario testing Sharpe Ratio and Value at Risk It gives detailed examples of using each of the metrics Chapter 6 The Three Common Approaches for Calculating Value at Risk Value at Risk VaR has become the standard approach for measuring market risk This chapter is devoted to explaining the details of the three common approaches to calculating VaR Parametric VaR Historical VaR and Monte Carlo VaR We work through increasingly complex examples and compare the strengths of each approach Note many readers will be particularly interested in this chapter because the name VaR is well known and has a certain mystery Chapter 7 Value at Risk Contribution The Value at Risk Contribution VaRC is a useful way of pinpointing the source of the portfolio's risk VaRC can break down the risk by instrument trading desk or market risk factor Examples are given for several types of VaRC Chapter 8 Testing VaR Results to Ensure Proper Risk Measurement This chapter discusses the procedures required by regulators to backtest VaR calculators to check that their predictions of losses are consistent with market events Chapter 9 Calculating Capital for Market Risk VaR is used as the basis for calculating both Regulatory Capital and Economic Capital for Market Risks In this chapter VaR also extended to measure the risk of Asset Management operations Chapter 10 Overcoming VaR Limitations Although VaR is the best single metric for market risks it has several limitations The limitations and typical solutions are discussed in this chapter Chapter 11 The Management of Market Risk This chapter concludes the market risk section by describing how the results of risk measurement are used by management to identify the sources of risk It also describes the process of setting VaR Limits Note readers should be particularly interested in VaR Limits because it is difficult and an important element in controlling a bank's risk ASSET LIABILITY MANAGEMENT SECTION Chapter 12 Introduction to Asset Liability Management Asset Liability Management ALM is primarily concerned with the interest rate and liquidity risks that are created when commercial banks take in short term deposits from customers and give out long term loans This chapter describes how those risks arise and the risk characteristics of different types of deposits and loans Chapter 13 Measurement of Interest Rate Risk for ALM This chapter

discussed the primary techniques used to measure interest rate risk Gap reports Rate shift scenarios and Simulations Chapter 14 Funding Liquidity Risk in ALM The measurement of liquidity risk is broken into three groups expected unusual and crisis events Measurement techniques are given for each group Chapter 15 Funds Transfer Pricing and the Management of ALM Risks A key use of asset liability measurement is the calculation of the fair price at which funds should be lent from one department to another within a bank This is one of the keys to integrated risk measurement and is a critical component in measuring risk adjusted profitability and setting prices to customers A typical balance sheet is used to illustrate how transfer pricing works in detail CREDIT RISK SECTION Chapter 16 Introduction to Credit Risk This chapter discusses the sources of credit risk and how measurement is used to manage the risks Chapter 17 Types of Credit Structure For readers who are unfamiliar with lending operations we discuss the ways that credit exposures are structured in commercial and retail lending It also describes the calculation of credit exposure for derivatives trading operations and gives an overview of credit derivatives Chapter 18 Risk Measurement for a Single Facility This chapter shows how the Expected Loss and Unexpected Loss for a loan can be calculated from the Probability of Default Loss In the Event of Default Exposure at Default and the Grade Migration Matrix Chapter 19 Estimating Parameter Values for Single Facilities One of the main difficulties in credit risk measurement is the estimation of values for Probability of Default Loss Given Default and Exposure at Default This chapter discusses estimation techniques such as Discriminant Analysis and the Merton Model It also gives parameter values that can be used as the basis for the reader's own models The parameter values are used in examples to demonstrate how the credit risk calculations are used Chapter 20 Risk Measurement For A Credit Portfolio Part One To estimate the overall risk for a portfolio many credit instruments we must examine the correlation between losses This chapter describes the Covariance Credit Portfolio Model and the different approaches available for estimating default correlations It also describes how the correlations can be used to estimate the Unexpected Loss Contribution and the Economic Capital for a single facility within a portfolio Chapter 21 Risk Measurement For A Credit Portfolio Part Two This chapter describes the four other widely used approaches for estimating the risk of credit portfolios the actuarial model the Merton based simulation model the macro economic default model and the macro economic cashflow model used for structured and project finance It concludes with a section describing how the models can be combined in a unified framework to create an integrated simulation of all the bank's risks Chapter 22 Risk Adjusted Performance and Pricing for Loans Knowing the economic capital for a loan this chapter shows how to calculate the minimum price that should be charged to a loan customer The analysis shows how to include multi year effects such as grade migration Illustrative examples are included Note this chapter should be of interest to readers because loan pricing is another difficult and important subject that is rarely discussed in other books Chapter 23 Regulatory Capital for Credit Risk The Basel Committee on Banking Supervision often called the BIS is planning fundamental changes to the way that banks must calculate the capital that they hold The new calculations will be very similar to the

calculations described in the rest of this book for economic capital This chapter summarizes the history of the Capital Accords then compares the different approaches that the BIS will allow It also gives a standard plan for implementing the new Accords Note this should be of interest to readers because the shift to BIS measurement is of major importance it will be difficult for most banks and it must be completed by 2005 OPERATING RISK SECTION Chapter 24 Operating risk The quantification of Operating Risks is on the frontier of the industry s understanding of risk measurement The risk estimation approaches can be categorized as either qualitative structural or actuarial These approaches are described including Key Risk Indicators and the BIS approaches INTEGRATED RISK SECTION Chapter 25 Inter risk Diversification and Bank Level RAROC This chapter describes how all the models are linked to calculate Economic Capital and Risk Adjusted Profitability for the Bank as a whole It concludes with of the steps normally required to implement the bank wide measurement of Economic Capital and RAROC

**Statistical Methods for Measuring Market Risk Model Performance - Comparison in View of the Fundamental Review of the Trading Book** Maximilian Dinse, 2016 During the last two decades the general superiority of Expected Shortfall ES over Value at Risk VaR has been highlighted frequently Nevertheless VaR remained the fundamental regime for regulatory internal model approaches to market risk under Basel I Basel II 5 and Basel III for more than 15 years Just

recently the Basel Committee on Banking Supervision finally announced to move to ES taking into account the experiences made during the financial crisis and the significant weaknesses of VaR Their resistance can be attributed to the specific characteristic of ES as it cannot be easily backtested compared with VaR While a lot of different backtesting methodologies have already been identified for VaR less work has been done for ES In 2011 it was even shown that ES does not fulfill the requirements of an elicitable risk measure which was interpreted as the fundamental proof that ES could not be backtested This thesis presents and evaluates three alternative backtesting approaches which could even be used for backtesting ES The thesis finds clear evidence against the criticism of ES by showing that backtesting is generally possible and that concrete tests can be applied to evaluate market risk model performance The results will also offer added value to regulators as first thoughts will be provided on the question of how this test could be converted into a traffic light approach similar to what is currently in place for regulatory VaR backtesting
