Meat-eating and Human Evolution Craig B. Stanford, Henry T. Bunn, 2023 When why and how early humans began to eat meat are fundamental unresolved questions in the study of human origins **The Hunting Apes** Craig B. Stanford, 2020-12-08 What makes humans unique What makes us the most successful animal species inhabiting the Earth today Most scientists agree that the key to our success is the unusually large size of our brains Our large brains gave us our exceptional thinking capacity and led to humans other distinctive characteristics including advanced communication tool use and walking on two legs Or was it the other way around Did the challenges faced by early humans push the species toward communication tool use and walking and in doing so drive the evolutionary engine toward a large brain In this provocative new book Craig Stanford presents an intriguing alternative to this puzzling question an alternative grounded in recent groundbreaking scientific observation According to Stanford what made humans unique was meat Or rather the desire for meat the eating of meat the hunting of meat and the sharing of meat Based on new insights into the behavior of chimps and other great apes our now extinct human ancestors and existing hunting and gathering societies Stanford shows the remarkable role that meat has played in these societies Perhaps because it provides a highly concentrated source of protein essential for the development and health of the brain meat is craved by many primates including humans This craving has given meat genuine power the power to cause males to form hunting parties and organize entire cultures around hunting And it has given men the power to manipulate and control women in these cultures Stanford argues that the skills developed and required for successful hunting and especially the sharing of meat spurred the explosion of human brain size over the past 200 000 years He then turns his attention to the ways meat is shared within primate and human societies to argue that this all important activity has had profound effects on basic social structures that are still felt today Sure to spark a lively debate Stanford s argument takes the form of an extended essay on human origins The book s small format helpful illustrations and moderate tone will appeal to all readers interested in those fundamental questions about what makes us human

Meat-eating and Human Evolution Henry Thomas Bunn, 1982 **Meat Eating and Human Evolution** Henry T. Bunn, 1993 **The Hunting Apes** Craig Britton Stanford, Stanford, Craig Britton Stanford, 1999 Argues that the desire for meat and the eating hunting and sharing of meat spurred the expansion of human brain size that led to the success of the

human species and describes the continuing social impact of the sharing of meat Should We Eat Meat? Vaclav Smil, 2013-03-18 Meat eating is often a contentious subject whether considering the technical ethical environmental political or health related aspects of production and consumption This book is a wide ranging and interdisciplinary examination and critique of meat consumption by humans throughout their evolution and around the world Setting the scene with a chapter on meat s role in human evolution and its growing influence during the development of agricultural practices the book goes on to examine modern production systems their efficiencies outputs and impacts The major global trends of meat consumption are described in order to find out what part its consumption plays in changing modern diets in countries around the world The heart of the book addresses the consequences of the massive carnivory of western diets looking at the inefficiencies of production and at the huge impacts on land water and the atmosphere Health impacts are also covered both positive and negative In conclusion the author looks forward at his vision of rational meat eating where environmental and health impacts are reduced animals are treated more humanely and alternative sources of protein make a higher contribution Should We Eat Meat is not an ideological tract for or against carnivorousness but rather a careful evaluation of meat s roles in human diets and the environmental and health consequences of its production and consumption It will be of interest to a wide readership including professionals and academics in food and agricultural production human health and nutrition environmental science and regulatory and policy making bodies around the world **The Humans Who Went Extinct**

Food and Human Evolution Berman Hudson, 2021-10-01 Food has played a major role in human evolution The fact that we stand upright that we can talk that we have big brains even traits such as altruism and a sense of fairness all of these can be attributed largely to the kinds of food our ancestors ate and how they acquired it When our hominid ancestors learned to make stone weapons it enabling them to kill and butcher large animals Eating and sharing meat led to our big brains and our Machiavellian intelligence We now face a modern food related crisis About 100 years ago people began to abandon traditional diets in favor of refined pre packaged factory made foods If you list the top ten crops receiving agricultural subsidies from USDA no fruit or vegetable makes the list This book describes how the rise of industrial food production unleashed an epidemic of metabolic disease that now threatens the very future of our species America is being divided into two distinct populations an obese majority that is subject to disease and early death and a minority that remains largely free

of these diseases Diet induced metabolic disease is beginning to pass directly from mothers to their children Because of this inter generational amplification an evolutionary crisis is looming This book offers a tantalizing range of information and ideas for readers interested in nutrition anthropology prehistoric studies and human evolution and food diet and human health as viewed from an overtly evolutionary perspective **Human Evolution** Noel Korn,Fred W.
