The Ashgate Research Companion to Theological Anthropology

Joshua R. Farris, Charles Taliaferro, 2016-03-09 In recent scholarship there is an emerging interest in the integration of philosophy and theology. Philosophers and theologians address the relationship between body and soul and its implications for theological anthropology. In so doing philosopher theologians interact with cognitive science, biological evolution, psychology and sociology. Reflecting these exciting new developments The Ashgate Research Companion to Theological Anthropology is a resource for philosophers and theologians, students and scholars interested in the constructive critical exploration of a theology of human persons. Throughout this collection of newly authored contributions key themes are addressed: human agency and grace, the soul, sin and salvation, Christology, glory, feminism, the theology of human nature and other major themes in theological anthropology in historic as well as contemporary contexts.

Basic and Applied Memory Research

Douglas J. Herrmann, Chris Herzog, Cathy McEvoy, Paula Hertel, Marcia K. Johnson, 2013-11-19 Basic researchers unlock the secrets of nature, applied researchers unlock the means by which those secrets of nature can change people's lives. Neither basic nor applied research has an independent impact. These volumes examine the convergence of basic and applied research in the field of memory. Volume 1 Theory and Context focuses on the methods for understanding and applying basic memory theory while Volume 2 Practical Applications expands the understanding of practical memory research by providing in-depth research examples and findings. If the science of memory is to make a significant contribution to society, coordinating our basic and applied efforts and determining how they complement each other become of paramount importance. These volumes will help in this regard both as textbooks demonstrating how to investigate memory and apply basic memory theory and as reference sources leading to a better understanding of certain problems in basic and applied memory research. Readers of these volumes will gain a thorough grasp of the way major themes relate to basic and applied research, collaboration, how programmatic basic and applied research can be conducted on particular memory problems and the manner in which basic and applied work in major problem areas has been incorporated into the field of memory. Both volumes present important information that will be indispensable to researchers and students alike.
