**Make Yourself a Monster!** Kathy Ross,2012-01-01 This book provides instructions for twenty craft projects with a monster theme such as a howling banshee mask a mummy pin and a fire breathing dragon puppet *Frankenstein's Children* Iwan Rhys Morus,2014-07-14 During the second quarter of the nineteenth century Londoners were enthralled by a strange fluid called electricity In examining this period Iwan Morus moves beyond the conventional focus on the celebrated Michael Faraday to discuss other electrical experimenters who aspired to spectacular public displays of their discoveries Revealing connections among such diverse fields as scientific lecturing laboratory research telegraphic communication industrial electroplating patent conventions and innovative medical therapies Morus also shows how electrical culture was integrated into a new machine dominated consumer society He sees the history of science as part of the history of production and emphasizes the labor and material resources needed to make electricity work Frankenstein's Children explains that Faraday with his colleagues at the Royal Society and the Royal Institution looked at science as the province of a highly trained elite who presented their abstract picture of nature only to select groups The book contrasts Faraday's views with those of other practitioners to whom science was a practical skill based activity open to all In venues such as the Galleries of Practical Science electrical phenomena were presented to a public less distinguished but no less enthusiastic and curious than Faraday's audiences William Sturgeon for instance emphasized building apparatus and exhibiting electrical phenomena while chemists instrument makers and popular lecturers supported the London Electrical Society These previously little studied electricians contributed much to the birth of Frankenstein's children the not completely benign effects of electricity on a new consumer world Originally published in 1998 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

**Paper Frankenstein** Eve Wood,1998 Poetry I want to scream why no one asked me how it comes to be I am blown aside by the mere suggestion of flight by a wing contrived from the resin of flowers by Gabriel's flurry the flux of his silent rape Joseph Speaks His Mind Eve Wood's new collection of poems takes the harshness and disappointments of the day to day world and revitalizes them with a language that is equally at home in discussions of history and pornography nature and linguistics

**The Philosophy of Mathematics Education** Paul Ernest,2002-11-01 Although many agree that all

teaching rests on a theory of knowledge there has been no in depth exploration of the implications of the philosophy of mathematics for education This is Paul Ernest s aim Building on the work of Lakatos and Wittgenstein it challenges the prevalent notion that mathematical knowledge is certain absolute and neutral and offers instead an account of mathematics as a social construction This has profound educational implications for social issues including gender race and multiculturalism for pedagogy including investigations and problem solving and challenges hierarchical views of mathematics learning and ability Beyond this the book offers a well grounded model of five educational ideologies each with its own epistemology values aims and social group of adherents An analysis of the impact of these groups on the National Curriculum results in a powerful critique revealing the questionable assumptions values and interests upon which it rests The book finishes on an optimistic note arguing that pedagogy left unspecified by the National Curriculum is the way to achieve the radical aims of educating confident problem posers and solvers who are able to critically evaluate the social uses of mathematics
