Natural Language Processing Using Very Large Corpora:

Natural Language Processing Using Very Large Corpora S. Armstrong, Kenneth W. Church, Pierre Isabelle, Sandra Manzi, Evelyne Tzoukermann, David Yarowsky, 2013-04-17 **ABOUT THIS BOOK** This book is intended for researchers who want to keep abreast of current developments in corpus based natural language processing. It is not meant as an introduction to this field for readers who need one; several entry level texts are available including those of Church and Mercer 1993, Charniak 1993, Jelinek 1997. This book captures the essence of a series of highly successful work shops held in the last few years. The response in 1993 to the initial Workshop on Very Large Corpora, Columbus, Ohio, was so enthusiastic that we were encouraged to make it an annual event. The following year we staged the Second Workshop on Very Large Corpora in Kyoto. As a way of managing these annual workshops we then decided to register a special interest group called SIGDAT with the Association for Computational Linguistics. The demand for international forums on corpus based NLP has been expanding so rapidly that in 1995 SIGDAT was led to organize not only the Third Workshop on Very Large Corpora, Cambridge, Mass., but also a complementary workshop entitled From Texts to Tags, Dublin. Obviously the success of these workshops was in some measure a reflection of the growing popularity of corpus based methods in the NLP community. But first and foremost it was due to the fact that the work shops attracted so many high quality papers.

Intelligent Natural Language Processing: Trends and Applications Khaled Shaalan, Aboul Ella Hassanien, Fahmy Tolba, 2017-11-17 This book brings together scientists, researchers, practitioners and students from academia and industry to present recent and ongoing research activities concerning the latest advances, techniques and applications of natural language processing systems and to promote the exchange of new ideas and lessons learned. Taken together the chapters of this book provide a collection of high quality research works that address broad challenges in both theoretical and applied aspects of intelligent natural language processing. The book presents the state of the art in research on natural language processing, computational linguistics, applied Arabic linguistics and related areas. New trends in natural language processing systems are rapidly emerging and finding application in various domains including education, travel and tourism, and healthcare among others. Many issues encountered during the development of these applications can be resolved by incorporating language technology solutions. The topics covered by the book include Character and Speech Recognition, Morphological, Syntactic and Semantic Processing, Information Extraction, Information Retrieval and Question Answering, Text Classification and Text Mining, Text Summarization, Sentiment Analysis, Machine Translation, Building and Evaluating Linguistic Resources and Intelligent Language Tutoring Systems.

Handbook of Natural Language Processing Nitin Indurkha, Fred J. Damerau, 2010-02-22 The Handbook of Natural Language Processing, Second Edition presents practical tools and techniques for implementing natural language processing in computer systems. Along with removing outdated material, this edition updates every chapter and expands the content to include emerging areas such as sentiment analysis. New to the Second Edition: Greater
