**Natural Language Processing and Information Systems** Elisabeth Métais, Farid Meziane, Vijayan Sugumaran, Warren Manning, Stephan Reiff-Marganiec, 2023-06-13 This book constitutes the refereed proceedings of the 28th International Conference on Applications of Natural Language to Information Systems NLDB 2023 held in Derby UK in June 21-23 2023

The 31 full papers and 14 short papers included in this book were carefully reviewed and selected from 89 submissions. They focus on the developments of the application of natural language to databases and information systems in the wider meaning of the term *Natural Language Processing and Information Systems* Birger Andersson, Maria Bergholtz, P.

Johannesson, 2003-07-01 The workshop on Applications of Natural Language to Information Systems NLDB has since 1995 provided a forum for academic and industrial researchers and practitioners to discuss the application of natural language to both the development and use of software applications

The use of natural language in relation to software has contributed to improving the development of software from the viewpoints of both the developers and the users. Developers benefit from improvements in conceptual modeling software validation, natural language program specifications and many other areas. Users benefit from increased usability of applications through natural language query interfaces, semantic webs, text summarizations, etc. The integration of natural language and information systems has been a research objective for a long time now. Today the goal of good integration seems not so far fetched. This is due mainly to the rapid progress of research in natural language and to the development of new and powerful technologies. The integration of natural language and information systems has become a convergent point towards which many researchers from several research areas are focussing.

*Natural Language Processing and Information Systems* Chris Biemann, Siegfried Handschuh, André Freitas, Farid Meziane, Elisabeth Métais, 2015-06-03 This book constitutes the refereed proceedings of the 20th International Conference on Applications of Natural Language to Information Systems NLDB 2015 held in Passau Germany in June 2015. The 18 full papers, 15 short papers, 14 poster and demonstration papers presented were carefully reviewed and selected from 100 submissions. The papers cover the following topics: information extraction, distributional semantics, querying and question answering systems, context aware NLP, cognitive and semantic computing, sentiment and opinion analysis, information extraction and social media NLP, and usability, text classification and extraction, and posters and demonstrations.

*Natural Language Processing and Information Retrieval* Muskan Garg, Sandeep Kumar (Professor of computer science and engineering), Abdul Khader Jilani, Saudagar, 2023 This book presents the basics and recent advancements in natural language processing and information retrieval in a single volume. It will serve as an ideal reference text for graduate students and academic researchers in interdisciplinary areas of electrical engineering, electronics engineering, computer engineering and information technology. This text emphasizes the existing problem domains and possible new directions in natural language processing and information retrieval. It discusses the importance of information

retrieval with the integration of machine learning deep learning and word embedding This approach supports the quick evaluation of real time data It covers important topics including rumor detection techniques sentiment analysis using graph based techniques social media data analysis and language independent text mining Features Covers aspects of information retrieval in different areas including healthcare data analysis and machine translation Discusses recent advancements in language and domain independent information extraction from textual and or multimodal data Explains models including decision making random walk knowledge graphs word embedding n grams and frequent pattern mining Provides integrated approaches of machine learning deep learning and word embedding for natural language processing Covers latest datasets for natural language processing and information retrieval for social media like Twitter The text is primarily written for graduate students and academic researchers in interdisciplinary areas of electrical engineering electronics engineering computer engineering and information technology *Natural Language Processing and Information Retrieval* Tanveer Siddiqui, U. S. Tiwary, 2008-05 Natural Language Processing and Information Retrieval is a textbook designed to meet the requirements of engineering students pursuing undergraduate and postgraduate programs in computer science and information technology The book attempts to bridge the gap between theory and practice and would also serve as a useful reference for professionals and researchers working on language related projects

### **Engineering and Managing**

**Software Requirements** Aybüke Aurum, Claes Wohlin, 2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered analyzed documented and managed throughout their complete lifecycle Traditionally it has been concerned with technical goals for functions of and constraints on software systems Aurum and Wohlin however argue that it is no longer appropriate for software systems professionals to focus only on functional and non functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit Instead they call for a broader perspective in order to gain a better understanding of the interdependencies between

enterprise stakeholders processes and software systems which would in turn give rise to more appropriate techniques and higher quality systems Following an introductory chapter that provides an exploration of key issues in requirements engineering the book is organized in three parts Part 1 presents surveys of state of the art requirements engineering process research along with critical assessments of existing models frameworks and techniques Part 2 addresses key areas in requirements engineering such as market driven requirements engineering goal modeling requirements ambiguity and others Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners not only in software engineering but also in other disciplines such as business process engineering and management science

The papers are organized in the following topical sections: argumentation mining and applications, deep learning, neural languages and NLP, social media and web analytics, question answering, corpus analysis, semantic web, open linked data and ontologies, natural language in conceptual modeling, natural language and ubiquitous computing, and big data and business intelligence.

**Natural Language Processing and Information Systems**

Andrés Montoyo, Rafael Munoz, Elisabeth Métais, 2005-05-03 NLDB 2005 the 10th International Conference on Applications of Natural Language to Information Systems was held on June 15-17, 2005 at the University of Alicante, Spain. Since the first NLDB conference in 1995, the main goal has been to provide a forum to discuss and disseminate research on the integration of natural language resources in information system engineering. The development and convergence of computing, telecommunications and information systems has already led to a revolution in the way that we work, communicate with each other, buy goods and use services and even in the way that we entertain and educate ourselves. The revolution continues and one of its results is that large volumes of information will increasingly be held in a form which is more natural for users than the data presentation formats typical of computer systems of the past. Natural language processing (NLP) is crucial in solving these problems and language technologies will make an indispensable contribution to the success of information systems. We hope that NLDB 2005 was a modest contribution to this goal. NLDB 2005 contributed to advancing the goals and the high international standing of these conferences largely due to its Program Committee composed of renowned researchers in the field of natural language processing and information system engineering. Papers were reviewed by three reviewers from the Program Committee. This clearly contributed to the significant number of papers submitted: 95. Twenty-nine were accepted as regular papers, while 18 were accepted as short papers.
