## Nature Of Man:

**Nature and Human Nature** Lawrence Kelso Frank, 1951      *The Biosocial Nature of Man* Ashley Montagu, 1971 Man is an animal first but not foremost Man is both an animal and the most complexly developed of all social beings Indeed man's social development has been such as to render his biological development something that has become increasingly subject to his own control If men are to exercise that control wisely it is desirable that they shall make themselves well acquainted with the basic facts concerning human nature In the present book Professor Ashley Montagu has attempted to provide the fundamental information concerning the nature of the biological factors on the one hand and the social factors on the other which enter into the making of the biosocial nature of man Professor Montagu discusses the origins of our present beliefs concerning human nature and demonstrates the fallacies inherent in many of these time honored views as well as those inherent in theories of many prominent writers in this controversial field The contribution made in this volume to the clarification of our understanding of the true meaning of human nature represents a scientific contribution of importance For if humanity is to realize its own potentialities one of the first prerequisites is an understanding of what those potentialities are If we would know what we are born for it is important that we know not only what we are born as but how we can be made into what we can become Written in non technical language this informative and stimulating book will cause the reader to revalue many of his valuations and to rethink once again his many beliefs concerning human nature Cover PsycINFO Database Record c 2014 APA all rights reserved      **Nature and Human Nature** Lawrence K. Harris, 2012 The Ascent of Man develops a comprehensive theory of human nature James F Harris sees human nature as an emergent property that supervenes a cluster of properties Despite significant overlap between individuals that have human nature and those that are biologically human the concept of human nature developed in this book is different Whether biologically human or not an individual may be said to possess human nature This theory of human nature is called the cluster theory Harris takes as his point of departure Plato's comment that in learning what a thing is we should look to the ways in which it acts upon or is acted upon by other things He commits to a methodological naturalism and draws upon current views from the social and biological sciences The cluster theory he develops represents one of the very few completely novel theories of human nature developed in the post Darwin era It will prove most useful in dealing with philosophical questions involving such contemporary issues as cloning cybernetics and the possibility of extraterrestrial life The fundamental conceptual issue is how plastic and elastic is the nature of human nature Just how different might we imagine human beings to be and still be human in the sense that they still possess whatever it is that accounts for a unique nature The theory of human nature developed in this book is a descriptive dynamic bottom up non essentialist naturalist
