The Nature of Scientific Innovation, Volume I David Dent, 2024-12-01 Innovation is a major driver of social economic and environmental change and is researched extensively by academics from disciplines as diverse as business engineering economics sociology and psychology On the whole each discipline pursues its own pathway to understanding without an interdisciplinary framework that links diverse research outputs This partite structure creates a remove from the practical realities of entrepreneurship and the innovators who operate and perceive innovation in its entirety This book delivers insights and creates a different framework one that includes terminologies and typologies greater understanding of paradigmatic influences in science needs vs wants and demand impact and value of knowledge publications and patents and economic benefits It challenges current approaches to education research creativity and skills development infrastructure investment and policy This book addresses changes needed to better deliver innovation at a time when the world is desperate for solutions to global problems It will be of interest to scholars and students of innovation from multiple disciplines as well as practitioners policymakers and all those with an interest in scientific innovation The first volume focuses on the processes the means and the impact of scientific innovation It highlights the way scientific research came to the fore as an instrument of government policy for economic growth the way research is undertaken the structures and processes involved the values biases and limitations associated with them and why these matter for innovation Questions are asked about who innovation is for and whether value is being captured in ways that really matter whether the systems are fit for purpose and how meaningful impact could be delivered to meet societal economic and environmental needs and priorities

Views of Nature, and of the Elements, Forces, and Phenomena of Nature, and of Mind Ezra Champion Seaman, 1873

Agency, Democracy, and Nature Robert J. Brulle, 2000 In this book Robert Brulle draws on a broad range of empirical and theoretical research to investigate the effectiveness of U S environmental groups Brulle shows how Critical Theory in particular the work of Jürgen Habermas can expand our understanding of the social causes of environmental degradation and the political actions necessary to deal with it He then develops both a pragmatic and a moral argument for broad based democratization of society as a prerequisite to the achievement of ecological sustainability From the perspectives of frame analysis resource mobilization and historical sociology using data on more than one hundred environmental groups Brulle examines the core beliefs structures funding and political practices of a wide variety of environmental organizations He identifies the social processes that foster the development of a democratic environmental movement and those that hinder it He concludes with suggestions for how environmental groups can make their organizational practices more democratic and politically effective

General

Systems Theory: Problems, Perspectives, Practice (2nd Edition) Lars Skyttner, 2006-01-04 Systems theorists see common principles in the structure and operation of systems of all kinds and sizes They promote an interdisciplinary science adapted for a universal application with a common language and area of concepts In order to solve problems make recommendations and predict the future they use theories models and concepts from the vast area of general systems theory This approach is chosen as a means to overcome the fragmentation of knowledge and the isolation of the specialist but also to find new approaches to problems created by earlier solution of problems This revised and updated second edition of General Systems Theory Ideas and Applications includes new systems theories and a new chapter on self organization and evolution The book summarizes most of the fields of systems theory and its application systems science in one volume It provides a quick and readable reference guide for future learning containing both general theories and practical applications without the use of complicated mathematics

Emerson's Nonlinear Nature Christopher J. Windolph, 2007 Examines Emersonian naturalism from the standpoint of nonlinearity offering new ways of reading and thinking about Emerson's stance toward nature and the influence of science on his thought Windolph breaks new ground by exploring how considerations of shape and the act of seeing underpin all of Emerson's theories about nature Provided by publisher

New Ecoinformatics Tools in Environmental Science Vladimir F. Krapivin, Costas A. Varotsos, Vladimir Yu.

Soldatov, 2015-01-24 This book provides new insights on the study of global environmental changes using the ecoinformatics tools and the adaptive evolutionary technology of geoinformation monitoring The main advantage of this book is that it gathers and presents extensive interdisciplinary expertise in the parameterization of global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development In this regard the crucial global

problems concerning the dynamics of the nature society system are considered and the key problems of ensuring the system's sustainable development are studied. A new approach to the numerical modeling of the nature society system is proposed and results are provided on modeling the dynamics of the system's characteristics with regard to scenarios of anthropogenic impacts on biogeochemical cycles, land ecosystems and oceans. The main purpose of this book is to develop a universal guide to information modeling technologies for assessing the function of environmental subsystems under various climatic and anthropogenic conditions.

Issues in Science Education Jack Rhoton, 1996. This publication addresses the issues and practical approaches needed to lay the foundation upon which science educators can work together to build effective science programs. It shares the ideas, insights and experiences of individuals ranging from science supervisors to university personnel to agencies representing science education. Numerous examples illustrate the utility of topics to practitioners as well as address general issues and perspectives related to science education reform.

Section I Science Education Reform examines the issues associated with science education reform. Section II Technology illustrates how technology can be incorporated into the curriculum and used to promote student learning. Section III Science Education Research discusses the importance of basing curriculum and teaching decisions on research findings. Section IV Assessment and Evaluation examines alternative methods of assessment and evaluation. Sections V and VI Science Education Leadership and Effecting Change deal with the issues that impact the day to day work of curriculum developers, instructional leaders and science teachers. Finally, section VII Professional Development addresses general issues and perspectives related to professional development.

Seeing Nature Through Gender Virginia Scharff, 2003. Environmental history has traditionally told the story of Man and Nature. Scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender. *Seeing Nature through Gender* here reintroduces gender as a meaningful category of analysis for environmental history, showing how women's actions, desires and choices have shaped the world and seeing men as gendered actors as well. In thirteen essays that show how gendered ideas have shaped the ways in which people have represented, experienced and consumed their world, Virginia Scharff and her coauthors explore interactions between gender and environment in history.

Ranging from colonial borderlands to transnational boundaries from mountaintop to marketplace they focus on historical representations of humans and nature on questions about consumption on environmental politics and on the complex reciprocal relations among human bodies and changing landscapes They also challenge the ecofeminist position by challenging the notion that men and women are essentially different creatures with biologically different destinies Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly often with dire consequences for other people and organisms Here are considerations of the ways we study sexuality among birds of William Byrd s masking sexual encounters in his account of an eighteenth century expedition of how the ecology of fire in a changing built environment has reshaped firefighters own gendered identities Some are playful as in a piece on the evolution of snow bunnies to shred betties Others are dead serious as in a chilling portrait of how endocrine disrupters are reinventing humans animals and water systems from the cellular level out Aiding and adding significantly to the enterprise of environmental history Seeing Nature through Gender bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we ve engraved on ourselves and on the planet
