Neanderthals And Modern Humans An Ecological And Evolutionary Perspective:

Neanderthals and Modern Humans Clive Finlayson, 2004-03-11 *Neanderthals and Modern Humans* develops the theme of the close relationship between climate change ecological change and biogeographical patterns in humans during the Pleistocene. In particular, it challenges the view that Modern Human superiority caused the extinction of the Neanderthals between 40 and 30 thousand years ago. Clive Finlayson shows that to understand human evolution, the spread of humankind across the world and the extinction of archaic populations, we must move away from a purely theoretical evolutionary ecology base and realise the importance of wider biogeographic patterns including the role of tropical and temperate refugia. His proposal is that Neanderthals became extinct because their world changed faster than they could cope with and that their relationship with the arriving Modern Humans where they met was subtle.

The World from Beginnings to 4000 BCE Ian Tattersall, 2008-02 In this lively and readable introduction, renowned anthropologist Ian Tattersall thoroughly examines both fossil and archaeological records to trace human evolution from the earliest beginnings of our zoological family Hominidae through the appearance of *Homo sapiens* to the Agricultural Revolution.

When Neanderthals and Modern Humans Met Nicholas John Conard, 2006 **The Humans Who Went Extinct** Clive Finlayson, 2010-11-11 Originally published in hardcover Oxford New York Oxford University Press 2009 The Improbable Primate Clive Finlayson, 2014-03-27 Taking an ecological approach to our evolution, Clive Finlayson considers the origins of modern humans within the context of a drying climate and changing landscapes. Finlayson argues that environmental change, particularly the availability of water, played a critical role in shaping the direction of human evolution, contributing to our spread and success. He argues that our ancestors carved a niche for themselves by leaving the forest and forcing their way into a long-established community of carnivores in a tropical savannah as climate changes opened up the landscape. They took their chance at high noon when most other predators were asleep. Adapting to this new lifestyle by shedding their hair and developing an active sweating system to keep cool, being close to fresh water was vital. As the climate dried, our ancestors, already bipedal, became taller and slimmer, more adept at travelling farther in search of water. The challenges of seeking water in a drying landscape moulded the minds and bodies of early humans and directed their migrations and eventual settlements. In this fresh and provocative view of a seven-million-year evolutionary journey, Finlayson demonstrates the radical implications for the interpretation of fossils and technologies and shows that understanding humans within an ecological context provides insights into the emergence and spread of *Homo sapiens sapiens* worldwide.
