Natural Resources as Capital Larry Karp, 2017-10-27 An introduction to the concepts and tools of natural resource economics including dynamic models market failures and institutional remedies This introduction to natural resource economics treats resources as a type of capital their management is an investment problem requiring forward looking behavior within a dynamic setting Market failures are widespread often associated with incomplete or nonexistent property rights complicated by policy failures The book covers standard resource economics topics including both the Hotelling model for nonrenewable resources and models for renewable resources The book also includes some topics in environmental economics that overlap with natural resource economics including climate change The text emphasizes skills and intuition needed to think about dynamic models and institutional remedies in the presence of both market and policy failures It presents the nuts and bolts of resource economics as applied to nonrenewable resources including the two period model stock dependent costs and resource scarcity The chapters on renewable resources cover such topics as property rights as an alternative to regulation the growth function steady states and maximum sustainable yield using fisheries as a concrete setting Other less standard topics covered include microeconomic issues such as arbitrage and the use of discounting policy problems including the Green Paradox foundations for policy analysis when market failures are important and taxation Appendixes offer reviews of the relevant mathematics The book is suitable for use by upper level undergraduates or with the appendixes masters level courses

Justice and Natural Resources Kathryn Mutz, Gary Bryner, Douglas Kenney, 2002 Just over two decades ago research findings that environmentally hazardous facilities were more likely to be sited near poor and minority communities gave rise to the environmental justice movement Yet inequitable distribution of the burdens of industrial facilities and pollution is only half of the problem poor and minority communities are often denied the benefits of natural resources and can suffer disproportionate harm from decisions about their management and use Justice and Natural Resources is the first book devoted to exploring the concept of environmental justice in the realm of natural resources Contributors consider how decisions about the management and use of natural resources can exacerbate social injustice and the problems of disadvantaged communities Looking at issues that are predominantly rural and western many of them involving Indian reservations public lands and resource development activities it offers a new and more expansive view of environmental justice The book begins by delineating the key conceptual dimensions of environmental justice in the natural resource arena Following the conceptual chapters are contributions that examine the application of environmental justice in natural resource decision making Chapters examine how natural resource management can affect a range of stakeholders quite differently distributing benefits to some and burdens to others the potential for using civil rights laws to address damage to natural and cultural resources the unique status of Native American environmental justice claims parallels

between domestic and international environmental justice how authority under existing environmental law can be used by Federal regulators and communities to address a broad spectrum of environmental justice concerns Justice and Natural Resources offers a concise overview of the field of environmental justice and a set of frameworks for understanding it It expands the previously urban and industrial scope of the movement to include distribution of the burdens and access to the benefits of natural resources broadening environmental justice to a truly nationwide concern *The Environment* Nyle C. Brady,1987 **Natural Resources** Judith Rees,2017-10-19 In this book first published in 1990 Judith Rees considers the spatial distribution of resource availability development and consumption and the distribution of resource generated wealth and welfare Showing that there are no simple answers she analyses the complex interactions between economic forces administrative structures and political institutions This well structured text is essential reading for upper level students in geography environmental planning economics and resource management
