Natural Selection Of The Chemical Elements The Environment And Lifes Chemistry:

The Natural Selection of the Chemical Elements Robert Joseph Paton Williams,J. J. R. Fraústo da Silva,1996 This beautifully written book is a study of the physical relationship between the inanimate environment and living organisms It describes how the evolution of both has been interactive and interdependent the authors show that this can be explained in terms of the properties of the chemical elements and their compounds The book discusses the physical and chemical balances between the animate and inanimate worlds with kinetic and thermodynamic principles given to support this analysis These principles are applied to both organic and inorganic chemical systems to provide a basis for understanding the evolution of life in terms of the interaction of both types of chemistry within ever more complex organizations The book concludes with an examination of an intriguing problem the long term consequences of our manufacture and exploitation of chemicals This intervention may be altering the symbiotic relationship between life and the environment an issue of great concern to ecologists and biologists as well as those who study chemistry

Darwinism and the Divine Alister E.

McGrath,2013-05-20 Darwinism and the Divine examines the implications of evolutionary thought for natural theology from the time of publication of Darwin's *On the Origin of Species* to current debates on creationism and intelligent design Questions whether Darwin's theory of natural selection really shook our fundamental beliefs or whether they served to transform and illuminate our views on the origins and meaning of life Identifies the forms of natural theology that emerged in 19th century England and how they were affected by Darwinism The most detailed study yet of the intellectual background to William Paley's famous and influential approach to natural theology set out in 1802 Brings together material from a variety of disciplines including the history of ideas historical and systematic theology evolutionary biology anthropology sociology and the cognitive science of religion Considers how Christian belief has adapted to Darwinism and asks whether there is a place for design both in the world of science and the world of theology A thought provoking exploration of 21st century views on evolutionary thought and natural theology written by the world renowned theologian and bestselling author
