Nature Study Bulletin Lyman D. Wooster, 1917 The Nature and Direction of Learning William Henry Burton, 1929 As the title indicates a considerable portion of this book is devoted to a consideration of the learning process It is a text that deals more with the theory of method than with the details of classroom procedure The treatment of the direction of learning occupies nearly three fourths of the book and covers the topics commonly discussed by writers in this field Interestingly the author divides this book into five units each of which is subdivided into several problems The typical treatment of a problem includes four phases 1 exploratory and pretest questions 2 a discussion of the problem 3 discussion questions for summarizing and testing and 4 a list of parallel readings The exploratory and pretest questions a distinctive characteristic of this volume are ingenious and serve to stimulate thinking about the problems considered This book with its treatment of methods of teaching should be a highly effective instrument for use in the professional training of teachers

Musselman,1967 **Learning in Social Context: The Nature and Profit of Living in Groups for Development** Ildikó Király,David Buttelmann,2017-05-25 One of the distinctive features of humans is their unique sociality Humans live in organized societies that are characterized by a high level of interdependence of group members in various aspects of life ranging from the

economic phenomenon of labour division to providing emotional support to others Under these circumstances the capacity to track social connections within and between groups has great adaptive value in managing everyday life We may understand the importance and adaptive value of tracking the scope of culturally shared knowledge if we consider the importance of cultural norms in guiding behaviour To become a competent member of their cultural group one must be able to conform to the group's specific behavioural norms and to accumulate culturally shared knowledge Acquiring this knowledge is essential for successful social interactions In contrast to current dominant explanatory theories emphasizing that social category formation is simply rooted in humans need to belong and affiliate with a group the aim of this e book is to provide evidence that in addition to its affiliative role children form social categories for epistemic purposes We show that children use specific cues like kinship patterns of resource allocation and consensus to understand group cohesion Section 1 Once children figured out who is in group and who is out group they show a significant in group bias in attention acting and learning Section 2 Yet this in group bias can be attenuated by induced synchronous behavior Section 3
