Für die Hausarbeit wurden zwei langjährige Fans des Genres interviewt. *Copyright's Excess* Glynn Lunney, 2018-04-12. For more than two hundred years, copyright in the United States has rested on a simple premise: more copyright will lead to more money for copyright owners, and more money will lead to more original works of authorship. In this important, illuminating book, Glynn Lunney tests that premise by tracking the rise and fall of the sound recording copyright from 1961 to 2015, along with the associated rise and fall in sales of recorded music. Far from supporting copyright's fundamental premise, the empirical evidence finds the exact opposite: more revenue led to fewer and lower quality hit songs. Lunney's breakthrough research shows that what copyright does is vastly increase the earnings of our most popular artists and songs, which net result means fewer hit songs. This book should be read by anyone interested in how copyright operates in the real world.

### **SPOTIFY: HOW THE COMPANY USES DATA TO INFLUENCE MUSIC TASTES AROUND THE WORLD**

MAX EDITORIAL,2025-04-15  
Introduction to the World of Data and Spotify The digital revolution has transformed the way we consume music and Spotify is one of the biggest drivers of this transformation The streaming app launched in 2008 has grown exponentially not just as a music service but as a platform that analyzes collects and uses data on its users behavior to personalize the music experience for billions of people around the world The key to Spotify s success is not only its vast library of music but its ability to use data to influence shape and even predict users musical tastes The Era of Music Streaming Before Spotify the music industry was dominated by CD purchases individual downloads and of course radio While radio has been a dominant platform for introducing new music for decades it has its limitations Spotify with its data driven model has revolutionized this dynamic by offering nearly unlimited access to music while also personalizing track suggestions based on users listening behavior The

Power of Data Spotify's biggest advantage over other music platforms is its ability to capture data. Every time a user listens to a song, skips a track, or saves a song to a playlist, Spotify collects this information and uses it to improve its music recommendations. Spotify's recommendation algorithm is powered by a wealth of data about users' preferences, creating a personalized experience for each user. How Data Shapes Music Preferences: Data collection goes beyond just choosing songs. Spotify monitors listening time, playlist engagement, repeat tracks, and even the times when a user is most likely to listen to a certain style of music. This data is then processed to create a detailed profile of each user, helping the platform predict which songs are most likely to appeal to them. Practical example: Imagine that you are a fan of pop music and frequently listen to the most popular tracks on the charts. Spotify, by noticing this pattern, can recommend similar songs that are starting to gain popularity or even songs by emerging artists in the same style, influencing your musical tastes before you have even heard of them.
