

# How to Practice Mindfulness

## 1

**Take a seat.** Find a place to sit that feels calm and quiet to you.

## 2

**Set a time limit.** If you're just beginning, it can help to choose a short time, such as 5 or 10 minutes.

## 3

**Notice your body.** You can sit or kneel however is comfortable for you. Just make sure you are stable and in a position, you can stay in for a while.

## 4

**Feel your breath.** Follow the sensation of your breath as it goes out and as it goes in.

## 5

**Notice when your mind has wandered.** When you get around to noticing this—in a few seconds, a minute, five minutes—simply return your attention to the breath.

## 6

**Be kind to your wandering mind.** Don't judge yourself or obsess over the content of the thoughts you find yourself lost in. Just come back.

**Programs on Performance-Related Outcomes** Kimberly A. Hepner,Erika Litvin Bloom,Sydne Newberry,Jessica L. Sousa,Karen Chan Osilla,Marika Booth,Armenda Bialas,Carolyn M. Rutter,2022-05-10 This report presents results from a systematic review and meta analyses of research examining how mindfulness meditation affects 13 performance related outcomes of interest to the U S Army and broader military The authors supplemented the systematic review by examining how mindfulness meditation could support stress management and exploring characteristics of selected mindfulness programs      **Mindfulness Meditation for Chronic Pain** Margaret Maglione,2016 RAND researchers conducted a systematic review that synthesized evidence from randomized controlled trials of mindfulness meditation interventions used adjunctively or as monotherapy to provide estimates of their efficacy and safety in alleviating chronic pain in adults Outcomes of interest included changes in pain symptomatology use of analgesics functional status health related quality of life functional impairment disability measures and adverse events Meta analyses for efficacy outcomes were conducted using the Hartung Knapp Sidik Jonkman method for random effects models Quality of evidence was assessed using the Grades of Recommendation Assessment Development and Evaluation or GRADE approach In total 28 studies met inclusion criteria Mindfulness meditation was associated with a small effect of improved pain symptoms compared with control groups in a meta analysis of 24 randomized controlled trials However there was evidence of substantial heterogeneity among studies resulting in a low quality of evidence assessment for this outcome We were unable to determine which patient subgroups or intervention characteristics were associated with greater efficacy Mindfulness meditation statistically significantly improved depression and health related quality of life Adverse events were rare and not serious but the vast majority of studies did not collect adverse event data The low quality of evidence prevents any strong conclusions about mindfulness meditation for

chronic pain Additional trials with adequate power greater efforts to prevent attrition monitoring of adherence to meditation practice active collection of adverse events and better reporting of methods are suggested Publisher's description

Jacks, 2023 Pain is a biopsychosocial phenomenon which draws from physiological responses as well as cultural and social context and mental states Pain is most frequently treated through surgical and pharmacological interventions which can be costly and time consuming especially when treating chronic pain Older adults suffer from chronic pain at a higher rate than the rest of the population and more accessible interventions are desperately needed to help manage the experience of chronic pain Mindfulness meditation is

increasingly being utilized for management of pain due to evidence of its effectiveness cheaper cost and ability to be practiced outside of medical facilities Prior research studies looked at the effectiveness of using mindfulness meditation to manage chronic pain but a limited number have focused on older adults This systematic review was conducted to examine the benefits of mindful meditation in managing chronic pain in older adults Eight studies were included and narrative synthesis was used to demonstrate that while mindful meditation does not appear to reduce pain intensity it may help manage chronic pain in older adults by changing the relationship to pain which in turn may reduce functional impairment and negative emotions and improve quality of life Clinical applications are discussed
