Odd Perceptions:

Odd Perceptions Richard L. Gregory, 2017-03-27 Richard Gregory was one of the major scientific thinkers of our time. Originally published in 1986, here he presents essays on the rich subject of perception: How we experience colours, shapes, sounds, touches, tickles, tastes, and smells is a mysterious and rich inquiry. Wonderful as these sensations are, though he argues that perception becomes really interesting when we consider how objects are identified and located in space and time as things we interact with using our intelligence to understand them. Gregory's essays convey the crucial importance of the major scientists and their achievements in the study of perception, but they also show us how much we can learn from our surroundings, our language, our times, our successes, and our failures. Why are we so often fooled in scientific as well as everyday life?

Odd Perceptions Richard L. Gregory, 2019-03-15 Richard Gregory was one of the major scientific thinkers of our time. Originally published in 1986, here he presents essays on the rich subject of perception: How we experience colours, shapes, sounds, touches, tickles, tastes, and smells is a mysterious and rich inquiry. Wonderful as these sensations are, though he argues that perception becomes really interesting when we consider how objects are identified and located in space and time as things we interact with using our intelligence to understand them. Odd Perceptions Richard Langton Gregory, 1986 **Even Odder Perceptions** Richard L. Gregory, 2017-03-27 Why did Newton struggle for thirty years to make gold by alchemy and then become Master of the Mint? Why do we blush? Why do we have illusions? In this collection of essays, originally published in 1994, Richard Gregory once again delights and tantalizes with tales of his childhood, his family, and friends, the famous and the infamous, and weaves them into a rich pattern to illuminate scientific principles and puzzles. If you can put the book down, each essay is complete on its own, but they are united by the magic of human perception. From seeing and hearing to feeling and believing, from the shape of traffic signs to knowledge of quantum mechanics, all our interactions with the outside world are mediated by perception. Our knowledge is further distilled by the machines which help our own biological mechanisms, like microscopes and telescopes, electric light, and even more powerfully by computer technology. But if the natural structures of perception can affect our interpretation of the world, how much more dramatically might science education and tools of information technology enhance, though sometimes mislead, our perception of reality? Even Odder Perceptions may not have all the answers, but it certainly poses more questions.
