Comprehensive Materials Processing provides students and professionals with a one stop resource consolidating and enhancing the literature of the materials processing and manufacturing universe. It provides authoritative analysis of all processes, technologies and techniques for converting industrial materials from a raw state into finished parts or products. Assisting scientists and engineers in the selection, design and use of materials, whether in the lab or in industry, it matches the adaptive complexity of emergent materials and processing technologies. Extensive traditional article level academic discussion of core theories and applications is supplemented by applied case studies and advanced multimedia features. Coverage encompasses the general categories of solidification, powder deposition and deformation processing and includes discussion on plant and tool design, analysis and characterization of processing techniques, high temperatures studies and the influence of process scale on component characteristics and behavior. Authored and reviewed by world class academic and industrial specialists in each subject field. Practical tools such as integrated case studies, user defined process schemata and multimedia modeling and functionality. Maximizes research efficiency by collating the most important and established information in one place with integrated applets linking to relevant outside sources.      Materials Michael F. Ashby, Hugh Shercliff, David Cebon, 2010

Materials Engineering Science: Processing and Design, winner of a 2014 Textbook Excellence Award (Texty) from The Text and Academic Authors Association, is the ultimate materials engineering text and resource for students developing skills and understanding of materials properties and selection for engineering applications. Written by world class authors, it takes a unique design led approach that is broader in scope than other texts, thereby meeting the curriculum needs of a wide variety of courses in the materials and design field, from introduction to materials science and engineering to engineering materials, materials selection and processing, and materials in design. This new edition retains its design led focus and strong emphasis on visual communication while expanding its treatment of crystallography and phase diagrams and transformations to fully meet the needs of instructors teaching a first year course in materials. The book is fully linked with the leading materials software package used in over 600 academic institutions worldwide as well as numerous government and commercial engineering departments. Winner of a 2014 Texty Award from the Text and Academic Authors Association, Design led approach motivates and engages students in the study of materials science and engineering through real life case studies and illustrative applications. Highly visual, full color graphics facilitate understanding of materials concepts and properties. Chapters on materials selection and design are integrated with chapters on materials fundamentals, enabling students to see
