Nutrition in Pregnancy - Volume II Janna L. Morrison, 2017 Maternal nutrition during pregnancy is of considerable interest to women their partners and their health care professionals In developing countries maternal

undernutrition is a major concern. However, with the increased prevalence of abundant high-calorie diets, their impact upon pregnancy outcome is of concern. In addition to the amount of nutrition available and its macronutrient composition within a diet, there is emerging evidence highlighting important roles for the lesser-studied micronutrients. Added to this complexity is the distinction between maternal and fetal nutrition and the impact the placenta plays in nutrient metabolism and overall nutrient supply to the fetus. Together, these many variables contribute to placental development and function, fetal growth, and where placental, fetal nutrition and growth is compromised through poor maternal diet and/or diet-induced alterations in placental metabolism, the impact is dramatic and can lead to lifelong implications for the offspring. This Special Issue book aims to highlight research in many of these areas.

Maternal Nutrition and Lactational Infertility John Dobbing, 1985. The influence of nutrition on reproductive function and the hypothesis linking body fat and physical exercise to amenorrhea and the timing of menarche and menopause. Appendices present a model for analysis of the relationship between breastfeeding data and postpartum anovulation data, a demographic commentary on major themes and issues raised by the workshop, and a brief summation of researchers' areas of agreement and uncertainty.
