single numbers to solve while others may involve the use of calculus principles. Since this book contains riddles geared towards children between the ages of 8-11, the range of math topics has been simplified to only include the relevant lessons. The primary math concepts the riddles in this book deal with are arithmetic, times tables, factors, completing patterns, and unit conversions. This variety will keep children engaged while not overwhelming them with difficult concepts they may not have encountered yet in the classroom. This book covers the following topics: Simple math riddles, Easy math riddles, Intermediate math riddles, Hard level riddles, Challenging math riddles, For fun riddles, And much more. Math can be quite a challenging subject for many students and teaching through puzzles and riddles helps children overcome these learning problems in a fun and productive way. In fact, math can be so complex sometimes that many students choose to give up learning this essential subject that is the basis for other sciences. Math riddles follow a popular current trend in education known as gamification, which seeks to mix learning and fun. If students are having fun while they learn, they will be more motivated to tackle harder subjects and advance their own learning. Even children who are already adept in a subject can benefit from gamification as it ensures they will not grow bored with the subject and they are always challenging themselves to improve. The challenge of solving riddles and the sense of pride children get from working hard to get a riddle right plays directly into this trend to turn math into a game. Math riddles really work to get your child engaged and personally invested in their own education because they make learning fun. The different difficulties serve as levels for your child to test their knowledge and expand into a better understanding of new concepts. When learning and playing are combined, your child will begin to see their education as something they want to actively participate in rather than something they passively learn in a classroom. Math riddles that make math exciting and engaging can teach kids the value of learning. They mix up the tired formula of worksheets while showing kids how they can apply math to their daily lives in unique ways. Letting kids figure out the answers to these puzzles teaches them problem solving skills that they can apply to all areas of life. It also allows them to feel the joy that comes with working hard on something and coming up with the correct solution. Providing gentle guidance towards the correct answer when your child is uncertain shows them that you are willing to take an active role in encouraging and supporting their education. Math riddles teach critical skills while encouraging cooperation and engagement from the whole family. Ready to get started? They are laid out in three chapters which get more difficult as you go through the book, in the author's opinion at least. The answers are at the back of the book if all else fails. These are more difficult riddles and are designed to be attempted by children from 10 years onwards as well as participation from the rest of the family. Who knew solving math problems could be this much fun? Do you get protests and whining every time your child has to do some math exercises? Do you hear "I give up" more often when they're doing math homework compared to their other school subjects? Do you want to make study time more exciting and something your child will actually look forward to? Many kids struggle with math, especially as they move on to more and more abstract concepts. It's harder to understand an idea when you can't visualize it and see how it applies to you. By making math concepts more relatable, children may find that math can actually be enjoyable and relevant. If you want to help your child become a math whiz or even just to become more receptive to this unpopular subject, you don't need to look any further. With this collection of math riddles and brain teasers carefully created by Cooper the Pooper, you won't get the same old math problems that only cover what's taught in school. You'll get unique problems that require your child to think beyond basic mathematical concepts and actually apply problem solving and analytical skills. Plus, wouldn't your child be more inclined to answer questions from a dog? [Math Appeal](#) Greg Tang, 2003
