**More Than Human** Ramez Naam, 2010-08 Originally published New York Broadway Books 2005  
Naam, 2010-12-31 Not everyone welcomes this scientific progress Cries of against nature arise from skeptics even as scientists break new ground at an astounding pace Across the political spectrum the debate roils Should we embrace the power to alter our minds and bodies or should we restrict it Distilling the most radical accomplishments being made in labs worldwide including gene therapy genetic engineering stem cell research life extension brain computer interfaces and cloning **More Than Human** offers an exciting tour of the impact biotechnology will have on our lives Throughout this remarkable trip author Ramez Naam shares an impassioned vision for the future with revealing insight into the ethical dilemmas posed by twenty first century science Encouraging us to celebrate rather than fear these innovations Naam incisively separates fact from myth arguing that these much maligned technologies have the power to transform the human race for the better so long as individuals and families are left free to decide how and if to use them If you've ever wondered about the boundaries of humanity **More Than Human** offers a vision of a world where we use our knowledge to improve ourselves unhindered by the fear of change

**Cyber-Humans** Woodrow Barfield, 2015-12-17 It is predicted that robots will surpass human intelligence within the next fifty years The ever increasing speed of advances in technology and neuroscience coupled with

the creation of super computers and enhanced body parts and artificial limbs is paving the way for a merger of both human and machine Devices which were once worn on the body are now being implanted into the body and as a result a class of true cyborgs who are displaying a range of skills beyond those of normal humans beings are being created There are cyborgs which can see colour by hearing sound others have the ability to detect magnetic fields some are equipped with telephoto lenses to aid their vision or implanted computers to monitor their heart and some use thought to communicate with a computer or to manipulate a robotic arm This is not science fiction these are developments that are really happening now and will continue to develop in the future However a range of legal and policy questions has arisen alongside this rise of artificial intelligence Cyber Humans provides a deep and unique perspective on the technological future of humanity and describes how law and policy will be particularly relevant in creating a fair and equal society and protecting the liberties of different life forms which will emerge in the 21st century Dr Woodrow Woody Barfield previously headed up the Sensory Engineering Laboratory holding the position of Industrial and Systems Engineering Professor at the University of Washington His research revolves around the design and use of wearable computers and augmented reality systems and holds both JD and LL.M degrees in intellectual property law and policy He has published over 350 articles and major presentations in the areas of computer science engineering and law He currently lives in Chapel Hill NC USA

### **The Earth Is Our Home**

Nelson Rivera, 2016-11-14 This book demonstrates that Mary Midgley's philosophy of evolution points the way towards considering the earth as our only true home since we are products of this planet and its evolving and complex life along with every other organism From the knowledge of ourselves as knowing animals with a biological as well as a cultural history Midgley proposes the elaboration of an evolutionary epistemology that situates us firmly on the earth together with other creatures while at the same time helping us to build knowledge of the world from the complexity of the human experience I like to call this approach by a known theological analogy a view from below that is from the underside of the world from the realms of nature and history Such an approach does not begin by assuming conceptions of design or order in nature a view that we term from above although it does not rule out the possibility of teleological or metaphysical constructions of reality in the long run This down to earth approach I consider essential for any philosophy or theology that wants to take evolutionary theory seriously while committed to a proper and non dismissive assessment of religious views
