

Losing Ground

Julian Lincoln Simon

Losing Ground:

Losing Ground Charles Murray, 1994 This classic book serves as a starting point for any serious discussion of welfare reform. *Losing Ground* argues that the ambitious social programs of the 1960s and 1970s actually made matters worse for its supposed beneficiaries the poor and minorities. Charles Murray startled readers by recommending that we abolish welfare reform but his position launched a debate culminating in President Clinton's proposal to end welfare as we know it.

Visions of Poverty Robert Asen, 2012-01-01 Images of poverty shape the debate surrounding it. In 1996 then President Bill Clinton signed welfare reform legislation repealing the principal federal program providing monetary assistance to poor families, Aid to Families with Dependent Children (AFDC). With the president's signature, this originally non-controversial program became the only title of the 1935 Social Security Act to be repealed. The legislation culminated a retrenchment era in welfare policy beginning in the early 1980s. To understand completely the welfare policy debates of the last half of the 20th Century, the various images of poor people that were present must be considered. *Visions of Poverty* explores these images and the policy debates of the retrenchment era, recounting the ways in which images of the poor appeared in these debates, relaying shifts in images that took place over time and revealing how images functioned in policy debates to advantage some positions and disadvantage others. Looking to the future, *Visions of Poverty* demonstrates that any future policy agenda must first come to terms with the vivid, disabling images of the poor that continue to circulate. In debating future reforms, participants whose ranks should include potential recipients ought to imagine poor people anew. This ground-breaking study in policymaking and cultural imagination will be of particular interest to scholars in rhetorical studies, political science, history and public policy.

Technological Competition and Interdependence Gunter Heiduk, Kozo Yamamura, 2016-06-01

Advanced industrial nations face many difficult political and economic problems due to the accelerating pace and evolving character of technological change. In this volume, economists and political scientists discuss analytic and policy issues relating to the current state of technological capability in the United States, Japan and Western Germany from a historical perspective and as a basis for future technological development. They also examine the problems and the issues involved in competition and cooperation among high technology firms and in evolving a more harmonious trade regime. The essays presented here explore from an international perspective the theoretical underpinnings of policy issues that are shaped by increasing international competition and by the changing form and character of the international trade regime. Issues are discussed against the background of declining American technological dominance and intensifying competition as well as increasing international cooperation among high technology firms. Specific topics include the internationalization of basic research, the closing gap between basic and applied research, the effect of nation-specific interfirm relations and various characteristics of labor markets on technological progress and the effectiveness of various forms of government research and development assistance or more broadly industrial policy. Three essays present overviews.

of the technological capability of and major policy issues faced by the United States Japan and Western Germany Others raise major theoretical and policy issues from the perspectives of political science and economics and address specific policy issues or groups of related issues

Changing Neighbourhoods Jill Grant,Alan Walks,Howard Ramos,2020-03-15 In recent decades growing inequality and polarization have been reshaping the social landscape of

Canada's metropolitan areas changing neighbourhoods and negatively affecting the lived realities of increasingly diverse urban populations This book examines the dimensions and impacts of increased economic inequality and urban socio spatial

polarization since the 1980s Based on the work of the Neighbourhood Change Research Partnership an innovative national comparative study of seven major cities the authors reveal the dynamics of neighbourhood change across the Canadian urban

system By mapping average income trends across neighbourhoods they show the kinds of factors social economic and cultural that influenced residential options and redistributed concentrations of poverty and affluence While the heart of the

book lies in the project's findings from each city other chapters provide critical context Taken together they offer important understandings of the depth and the breadth of the problem at hand and signal the urgency for concerted policy responses in

the decades to come
