**MOKA: Methodology for Knowledge Based Engineering Applications** Melody Stokes, 2001-01-01 Knowledge is power and money and making the best use of expensively acquired important information is vital to any company or organization that wishes to make the most of its assets A well run and structured system for Managing Engineering Knowledge can literally prevent engineers from having to re invent the wheel saving precious expert time and effort Exploiting the capital associated with design knowledge has been shown to release considerable savings in the cost and lead times for detail design of new products Until now there has been no common way of collecting structuring and formalizing the engineering knowledge associated with designs This not only makes it hard to plan and organize the process of building knowledge based engineering applications but also means that updating them and re using modules is almost impossible Methodology and software tools oriented to knowledge based engineering applications was created to fill this need It is a practical tool to help those involved with building systems that represent knowledge rather than a set of academic principles Managing Engineering Knowledge is a comprehensive user guide to the methodology and provides Accessible readable writing style Clear and easily navigable structure Summary margin notes for handy quick reference Generous use of examples and cases Numerous lively and informative diagrams Comprehensive guide to further reading chapter by chapter Convenient to use fold flat ring bound format with tabbed dividers Managing Engineering Knowledge caters for a wide range of people and backgrounds including general managers operating at the strategic level project managers engineering designers information technologists system modellers and technical analysts Indeed it bridges the communication gap between engineers with experience of the , **Transdisciplinary Engineering: A Paradigm Shift** Amy C.

Trappey, Margherita Peruzzini, Nel Wognum, 2017-07-15 Concurrent Engineering is based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process PCP Its main goal is to increase the efficiency and effectiveness of the PCP and reduce errors in the later stages and to incorporate considerations for the full lifecycle through life operations and environmental issues of the product It has become the substantive basic methodology in many industries and the initial basic concepts have matured and become the foundation of many new ideas methodologies initiatives approaches and tools This book presents the proceedings of the 24th ISPE Inc International Conference on Transdisciplinary formerly Concurrent Engineering TE 2017 held in Singapore in July 2017 The 120 peer reviewed papers in the book are divided into 16 sections air transport and traffic operations and management risk aware supply chain intelligence product innovation and marketing management human factors in design human engineering design methods and tools decision supporting tools and methods concurrent engineering knowledge based engineering collaborative engineering engineering for sustainability service design digital manufacturing design automation artificial intelligence and data analytics smart systems and the Internet of Things The book provides a

**Knowledge-Based Integrated Aircraft Design** Raghu Chaitanya Munjulury, 2017-05-23 The design and development of new aircraft are becoming increasingly expensive and timeconsuming To assist the design process in reducing the development cost time and late design changes the conceptual design needs enhancement using new tools and methods Integration of several disciplines in the conceptual design as one entity enables to keep the design process intact at every step and obtain a high understanding of the aircraft concepts at early stages This thesis presents a Knowledge Based Engineering KBE approach and integration of several disciplines in a holistic approach for use in aircraft conceptual design KBE allows the reuse of obtained aircrafts data information and knowledge to gain more awareness and a better understanding of the concept under consideration at early stages of design For this purpose Knowledge Based KB methodologies are investigated for enhanced geometrical representation and enable variable fidelity tools and Multidisciplinary Design Optimization MDO The geometry parameterization techniques are qualitative approaches that produce quantitative results in terms of both robustness and flexibility of the design parameterization The information parameters from all tools disciplines and the design intent of the generated concepts are saved and shared via a central database The integrated framework facilitates multi fidelity analysis combining low fidelity models with high fidelity models for a quick estimation enabling a rapid analysis and enhancing the time for a MDO process The geometry is further propagated to other disciplines Computational Fluid Dynamics CFD Finite Element Analysis FEA for analysis This is possible with an automated streamlined process for CFD FEM system simulation to analyze and increase knowledge early in the design process Several processes were studied to streamline the geometry for CFD Two working practices one for parametric geometry and another for KB geometry are presented for automatic mesh generation It is observed that analytical methods provide quicker weight estimation of the design and when coupled with KBE provide a better understanding Integration of 1 D and 3 D models offers the best of both models faster simulation and superior geometrical representation To validate both the framework and concepts generated from the tools they are implemented in academia in several courses at Link ping University and in industry
