report seeks to fill the gap by demonstrating a strong linkage between poverty and land management. Using Uganda as a case study the authors show that certain policies such as investments in soil and water conservation and agroforestry may simultaneously increase productivity and reduce poverty and land degradation. Other strategies including development of rural roads, non-farm activities and rural finance may reduce poverty without significantly affecting productivity or land management. Some policies however will likely involve trade offs among different goals and will need to have their negative impacts minimized. Those in government, NGOs, the private sector or academia who are concerned about sustainably reducing poverty in Sub-Saharan Africa will benefit from this analysis of how to pursue these key development goals.

Sustainable Land Management in Asia William Critchley, Frank Radstake, 2017-02-01. The Asian Development Bank has introduced significant changes in the way farmers and other stakeholders view and benefit from evolving approaches to sustainable land management. SLM practices firmly embedded in SLM are the management and climate resilience of natural resources which can be enhanced and scaled up by adopting a landscape approach. This publication sets out how the landscape approach can contribute to overcoming major environmental and developmental challenges focusing on rural areas of Asia and by examining prevalent forms of SLM namely participatory forest management, terraces, conservation agriculture and home gardens. This publication seeks to strengthen awareness of the landscape approach and facilitate the integration of its key elements into cooperation programs with its developing members.

American River National Recreation Area Feasibility Study Report United States. Bureau of Land Management. Folsom Resource Area, 1990.

Sustainable Land Management Floor Brouwer, 2008-10-31. In large parts of the world the reduction in the viability of agriculture and rural areas is an escalating problem. Sustainable Land Management offers a contemporary overview of the strategies employed to cope with the marginalisation of agriculture through analyses of case studies and regional trends in marginalisation. The authors argue that complexities and driving forces governing marginalisation are not always the same across nations and regions due to climate, geography, economics, legislation and political status. This book illustrates in what form these complexities exist and how they unravel at the national and regional levels. As the need to understand and cope with marginalisation processes has developed, the concept of multi-functionality has also gained a vital place in the string of coping strategies. This work contributes essential knowledge for the development of marginalisation mitigation policy actions across the globe. Informative and well documented this book will appeal to those researching and working in the fields of agricultural and resource economics, rural geography, environmental governance and sustainable development.
