**The Story of Manned Space Stations** Philip Baker,2007-08-20 Philip Baker charts the history of manned space stations from the very beginning in a logical chronological order He tells the story of the two major space powers starting out on their very separate programs but slowly coming together through ASTP Shuttle Mir and the ISS and includes programs that rarely get mentioned the US Manned Orbiting Laboratory and the Soviet Almaz station both military backed projects The Mir space station was one of the greatest human achievements in modern history and a thorough telling of its story is essential to this book During its life it grew and evolved into a truly international outpost with visitors from all over the world taking advantage of the only permanent space station in orbit at that time This book will be the only one of its kind to tell the whole story of the manned space stations from both nations from the very beginning to the current ISS story and to the possibilities beyond Each chapter of this book will contain interviews with many of the primary participants including the astronauts cosmonauts designers mission controllers doctors and managers most directly involved in the flights The author paints a vivid picture of two competing nations slowly coming together to form an alliance that is shaky and uncertain to begin with but grows from fierce competition into solid collaboration

Arthur A. Nussberger,2006 This book provides a factual account of life in the Aerospace Industry as experienced by a key engineer working in the major space programs of our time The story begins with an account of the Apollo program starting in1962 continues with experiences in the Space Shuttle and Space Station programs from 1968 to the present and gives additional accounts of the design of the Global Positioning Satellite and evaluations of a Satellite Power System concept for generating gigawatts of electrical power for terrestrial use The manuscript is unique in the way it uses pictures to help tell the story And is of current interest particularly as NASA publicizes the return to space of the Shuttle Orbiter

**Earth** Robert Zimmerman,2019-02-14 In this definitive account of the quest to establish a human presence in lifeless outer space award winning space historian Robert Zimmerman reveals the great global gamesmanship between Soviet and American political leaders that drove the space efforts of both following the Apollo lunar landings in the 1960s and 1970s Beaten to the Moon by their Cold War enemies the Russians were intent on being first to the planets They knew that to reach

other worlds they needed to learn how to build interplanetary spaceships and believed that manned space stations held the greatest promise for making that possible Thus from the very moment they realized they had lost the race to the Moon the Soviet government worked feverishly to build a viable space station program one that would dwarf the American efforts and allow the Russians to claim the vast territories of space as their own Like the race between the tortoise and the hare the ponderously bureaucratic Soviet Union actually managed to overtake the United States in this space station race Their efforts sometimes resulting in terrifying near death exploits not only put them far ahead of NASA it also served to reshape their own society helping to change it from a communist dictatorship to a freer and more capitalist society At the same time the American space program at NASA was also evolving but not for the better In fact in many ways the two programs and nations were slowly but inexorably trading places Drawing on his vast store of knowledge about space travel and modern history as well as hundreds of interviews with cosmonauts astronauts and scientists Zimmerman has superbly captured the exciting story of space travel in the last half of the twentieth century Leaving Earth tells that story and is required reading for space and history enthusiasts alike who wish to understand the context of the space exploration renaissance taking place now in the twenty first century

An investigation of the spin dynamics of manned space stations has been conducted The rigid body equations of motion for arbitrary rotating stations were outlined and programmed on an electronic data processing system Docking impacts attitude system torques mass unbalances and transient crew motions were simulated in these equations and a fourth order Runge Kutta integration procedure was used to determine the resultant station motion A toroidal configuration spinning about the axis of maximum moment of inertia was selected for the computer study and results are presented in nondimensional form The results are given as the traces of the station axis of symmetry in fixed space and as the time histories of the nondimensional angular velocities and attitudes of the station This representation provides a simple physical picture of the station motion and of the time variation of the primary motion coordinates The results of this analysis indicated that the applied moments mass unbalances and crew motions produced undamped station wobbling which to the crew would appear as a continuous rolling motion of the station floor Since undamped rolling motions produced by the disturbances when coupled with the station rotation could possibly lead to nausea and disorientation of the crew a means of damping these motions is desirable For this study two damping systems were considered a gyroscopic wobble damper and a proportional jet damper These systems in general were able to minimize the effects of the station wobble on the crew by reducing the

apparent rolling motions to a small tilt of the station floor The gyroscopic damping system was more efficient than the proportional jet system for small wobble angles but the jet system was more effective than the gyroscopic system for the large wobble angles

*Manned Laboratories in Space* S.F. Singer,2012-12-06

The publication of this book is extremely timely for the next major advances in manned space flight after Project Apollo will most likely be made in earth orbital operations Manned exploration of the moon will certainly continue after the initial landing but it will be performed essentially with the Saturn V launch vehicles and Apollo spacecraft developed in Apollo especially in the early phases Modifications to this basic hardware will increase operating capabilities to permit extensive lunar exploration during prolonged stay times by the astronauts on the moon's surface Manned orbital space stations have been studied for years and NASA is already well along in development of its first attempt to provide more spacious accommodations for astronaut scientists in its Saturn Workshop program While the Workshop is certainly not the ultimate space station of which our technology is capable it is a workable poor man's approach to the immediate need for using and expanding our present manned space flight capability without a detrimental loss of momentum The approach of converting a Saturn rocket stage into a manned laboratory and observatory in space is an improvisation that matches the use of the jerry built Jupiter C back in 1958 to launch Explorer I Let's hope that it can get the job done just as effectively
