

# Managing End User Computing in the Company

This slide represents how we will manage end user computing and includes to assist technical application deployment preparation for changing job roles, know users and so on.

## Centralize Application Deployment

- We have large number of apps operating and all application code will be stored on application servers, either in the data center or in the cloud, so that it can be delivered up to user sessions on devices at any time and from any location
- Add Text Here

## Prepare for Changing Job Roles

- By analyzing application usage patterns and the interrelationships between apps and user groups, the organization will be able to architect which app should be moved where
- Users will be classified based on the apps they use, the data they access, or the department to which they belong – or a combination of these criteria

## Know Users

- To evaluate application use and establish the importance of each application to the constituent user base and transitioning to EUC settings might be difficult for many users as they discover how apps work on different EUC platforms
- Add Text Here

## Shake Out the Bugs, Find

- Testing is crucial to the success of any big endeavor and metrics for testing should concentrate on application performance, overall end-user experience, server and storage consumption, and security implications

## Prepare for All-EUC Ahead

- Pandemic's termination will not spell the end of EUC, and many businesses are weighing the benefits of EUC and have concluded that it will be the default computing paradigm in the near future as critical assets, data, and apps are all housed in the business, EUC is inherently more secure, and the flexibility to utilize any device, anywhere is beneficial to productivity and user happiness

Management of End User Computing A Research Perspective Based on interviews with 200 end users and 50 information  
systems managers concerned with end user computing end users can be classified into six distinct types Each of them needs  
differentiated education support and control from the Information Systems function End users exist primarily in staff  
functions They develop and use a wide Spectrum of computing applications ranging from Operational systems of the type  
usually developed by information systems professionals to complex analytical programs To support a large number of their  
applications a new computing environment the third environment in addition to the traditional cobol and timesharing  
environments must be developed by Information Systems i s management Close attention must also be paid by i s  
management to the need to involve functional support personnel end users in each functional area who spend most of their  
time programming and aiding other end users in the i s end user management process An end user strategy is needed in each  
organization In addition users cite increasing needs for support from management Finally a new type of control process is  
necessary if end user computing is to be well managed About the Publisher Forgotten Books publishes hundreds of thousands
