Mai, Jerry McAdams, 1995. *Learning Partnerships: How Leading American Companies Implement Organizational Learning* by Robert Mai is the first book to take organizational learning from concept to reality, showing how companies are implementing basic learning principles to meet their business challenges. Written from a first hand perspective by an executive with a major performance improvement company, the book illustrates what organizational learning actually looks like in a wide variety of industries and how it is designed and managed. As companies are continually being challenged by changing markets and technology, organizational learning is increasingly becoming a key strategy for staying competitive. Based on cases drawn from more than 20 progressive American companies including American Airlines, Ameritech, Cadillac, Ford, Georgia Pacific and Saturn, *Learning Partnerships* addresses key issues facing organizations today, including how organizational learning occurs, why the learning organization can be a misleading term, the three key sources of organizational knowledge, building the leading barriers to organizational learning and how to overcome them, how teams can contribute to organizational learning and ways to stimulate and reinforce knowledge building behaviors.

The Risk Management of Everything Michael Power, 2004. The report describes the development of a new risk management culture within professions, companies and governments. The

obsession with managing risk is creating organisations which are not so much risk averse as responsibility averse In medicine doctors are practising defensive medicine where opinions are heavily qualified with caveats and patients left to make big decisions The report also refers to growing evidence that since Enron s failure major accountancy firms are declining to work with high risk clients the very ones that should be thoroughly audited When disclaimer paragraphs are longer than the professional opinions they follow we know something has gone wrong says author Professor Michael Power a director of the ESRC Centre for Analysis of Risk and Regulation at the London School of Economics In the interests of transparency small print should be made large and ruled out as a secondary risk management ploy The trends in professions such as medicine and auditing signal a withdrawal of individual judgement from the public Minimal records are kept staff are cautioned about the use of email and normal correspondence is littered with disclaimers The risk management of everything implies a society of small print Power sees the rise of the risk management of everything as a related trend to the audit culture which included the government s now widely criticised love of targets as a policy tool The Audit Explosion Power s previous Demos pamphlet predicted that the overuse of audit leads to a focus on measurable outputs rather than real outcomes The most influential dimension of the audit explosion is the process by which organisations are made auditable and structured to conform to the need to be monitored Power wrote in 1994 Power s new book argues that risk management is the new audit and is having a similar distorting effect on the performance of professionals companies and government

ontological epistemological and methodological implications of the complexity approach showing how very old questions are currently being reformulated and or reinterpreted in the light of complexity thinking Papers that appear in Part III address various important issues about the links between complexity and social organizational business and management questions Finally Papers in Part IV return once again to more global implications of Complexity thinking this time dealing with Ethical and Globalization issues of contemporary world
